Only the First Step | CANAUA is Difficult."

The first step in Spring should be to cleanse Nature's house from Winter's accumulations. Hood's Sarsaparilla does this work easily. It is America's Greatest Spring Medicine. It purifies the blood, as millens of people say.

It makes the weak strong, as nervous men and women gladly testify. It cures all blood diseases, as thousands of cured voluntarily write. It is just the medicine for you, as you will gladly say after you have given it a fair trial.

Bad Blood-" Although past 70 years & age I am thoroughly well. It was three bottles of Hood's Sarsaparilla that made me so after spending over \$60 in medical attendance. My trouble was a raw sore on my ankle." Mrs. Louisa Mason, Court Street, Lowell, Mass.

Running Sores - " After worrying four months I gave my children Hood's Sarsaparilla and it cured them of running sores. Hood's Pills cured me of dyspepsia and constipation." Mrs. KATE E. THOMAS, 81 Governor St., Annapolis, Md.

Consumptive Cough - "Five years ago I had a consumptive cough which reduced me to a skeleton. Was advised to take Hood's Sarsaparilla which I did and recovered normal health. I have been well ever since." MATILDA BRIDGEWATER, Cor.

A NEW ERA

Rev. Dr. Briggs on the Reunion of Christ's Church.

An Answer to Bishop Potter-Trend of

the Anglican Church. New York, May 23 .- Rev. Dr. Chas.

A. Briggs is quoted here in a letter today as follows: I have not sought refuge in the

Episcopal ministry. I made the change because I was assured that the banner of church unity was in the Protestant Episcopal Church, and nowhere else, and I have consecrated my life to that cause. If I know myself, I hold to all the sacred deposit of catholic truth in the church, as well as in Holy Scripture, and I shall do all in my power to bring out that truth and

"I feel that my study of Holy Scripture and of Christian history, as well as my own experience of God's grace, have led me to see in Holy Scripture the divine truth in somewhat different relations and proportions from those in which I was trained. It has been my with some of the roble men of our age, Roman Catholic and Protestant, Lutheran and Calvinist, Methodist, Presbyterian and Anglican, in most of the great universities of the world, and I have been guided to recognize the liv-

ing Christian in them all. I think we are about to enter a new age of the world, and that these things will be prominent in it—the imminence of God, the living, reigning Christ as priest and king, the presence of the indwelling spirit in the individual and in the organism of the church; the practice of holy love, entire sanctification, the communion of saints in this world, and in the other world, and the reconciliation and reunion of Christ's

'I have been brought to see these things and to regard them as the great banner principles for the future. For them I stand with all my soul, while I do not neglect or in any way discard any portion of the inheritance of Christ's church in doctrine or in creed. are adopting, by persisting in dishon-I am assured by pupils that I make the Bible to them more real, more powerful and more divine. I have never heard a single one of the 1,300 theological students I have trained in the past 26 years, who has said that I impaired his faith in Holy Scripture. The testimony is all the other way."

RAP AT "HIGHER CRITICS."

Rev. Dr. Benjamin F. Decosta, of the Church of St. John the Evangelist, prepared a sermon in answer to Bishop Potter's action in ordaining Dr. Briggs. and started to preach it, but after he had talked for about five minutes he was so overcome by emotional feeling that he passed over the bulk of his manuscript and dismissed his congregation with a ten-minute sermon. But after the service he gave out his manuscript with the announcement that he was unable to deliver it entirely. The sermon said in part:

'We live under a new dispensation. We have reached a new epoch. There is now no question as to the future of the Episcopal Church as to the The Scriptures are no longer to be enforced as an infallible guide. The church has retained the appearance of authority and its interpretations may now be governed by individual caprice. This result follows from former issues, ending with the Brooks case. Another case has now been literally forced upon the church, arraying the students in two hostile camps. Hitherto sacred places are illumined by the reflected light of pagan altar fires. Belief in the Bible as the inspired Word of God is a fundamental doctrine. If this doctrine is impugned, so are the doctrines generally of the whole church."

'It has been well said that the 'higher critics' are now bivouacked around the mouldering campfires of Tom

Wheat sowing in Manitoba is now progressing favorably, a week earlier than last spring, and Hunt Bros. are now hopeful of a plentiful supply of that grandest of wheats for the manu-facture of their celebrated "Diamond Flour" for the coming year.

THERE is not a more dangerous class of disorders than those which affect the breathing organs. Nullify this danger with Dr. Thomas' Eclec tric Oil—a pulmonic, of acknowledged effic ... It cures soreness and lameness when applied externally, as well as swelled neck and crick in the back; and, as an inward specific, possesse most substantial results.

Attracting Much Complimentary and Intelligent Attention.

Canada's Practical Loyalty Appreciat ed -Dishonest Apple Exporters

Ottawa, May 20 .- That Canadian affairs continue to attract very much interest in England-interest of an intelligent and practical kind-is once more evidenced by the attention which has been given to Mr. Fielding's budget speech. Exceptionally extended cable reports were supplied to the British journals, and these were very exto sively used, not only being given unusual prominence in the news columns of the various papers, but occupying a first place in the editorial page of the same issue. The general tone of these editorial comments is warmly congratulatory on the great prosperity which the country is enjoying, and next to that, very general comment was made upon the Minister's remarks anent the failure of the British manufacturers to take advantage of the preferential tariff. The manufacturers themselves are, by most writers blamed for this condition of affairs, which is instanced as another example of the lack of enterprise and quick adaptability to changing trade conditions to which the British manufac-

turer has too often to plead guilty. CANADA'S LOYALTY APPRE-CIATED.

More than one leading London daily refers in warm terms of commenda-tion to the consistently loyal and unselfish policy towards the mother country, which Canada has followed under the Laurier Government. The Daily Telegraph observes, for example: "The great thing is that our kinsmen in the Dominion have given one of the strongest proofs in their power of the reality of the ties which bind England and her colonies together, Without asking us for reciprocity, without de-Without manding that we should grant a preference in favor of Canadian breadstuffs, for instance-which would only tax the British workman's food-they have voluntarily given us concessions of considerable value, out of sheer gratitude for generous treatment in the past. This is what has moved the hearts of the English people, and has, among other things, led to the renun-ciation of the German and Belgian treaties. The full fruits of a policy so liberal and patriotic as this will not be reached immediately, although even now we are buying more Canadian products than ever before. The ultimate harvest will be the consolidation of our great empire with those most enduring of all bonds of connection and union-a common loyalty and reciprocity of affection."

SIR CHAS. TUPPER ANSWERED. What a significant comment such articles as that from which the above is an extract are upon the criticism of Sir Charles Tupper and many of his supporters in the House, that the government was guilty of unstatesmanlike disregard for Canadian interests when they inaugurated a preferential policy, without seeking to force from the old country concessions in return. As a student of history, having full knowledge of that characteristic spirit of independence which has marked the past of the empire, Sir Charles knows that the best possible way to make John Bull obdurate and unconciliatory is to attempt to force his hand. He is a mighty good-natured old fellow, and can be led almost anywhere, but if he get the idea that an attempt is being made to coerce him he is more stubborn than any mule yet created. The government failed to appreciate this fact in all its eighteen years of power. The present administration "got on to" it from the start, and not power. only have the British people understood and very thoroughly appreciated the change of policy, but the Canadian electorate-to whom the government is alone responsible—is fully alive to the significance of the change. DISHONEST APPLE EXPORTERS.

The tremendous importance of the matter must be my excuse for again referring to the folly of certain Canadian fruit exporters in the policy they est shipping of fruits to England-apples particularly. Before the agricultural committee of the house or three days ago, officials of the de-partment declared that the cause of the present unsatisfactory condition of the Canadian export apple trade in the British markets was the dishonest and practice of packing barrels with poor goods, placing a layer of prime fruit at the top and bottom of each barrel. The British trader is not accustomed to that kind of so-called sharp practice, and if he once has reason to distrust one with whom he has business relations, he will not only very peremptorily refuse to do business with that man again, but he is very naturally inclined to be suspicious of all traders in the same class. The federal de-partment of agriculture has done very much to advance the interests of those Canadian producers desirous of devel-oping the British market, but one or two experiences such as are referred to above, will do more to kill business than a year's intelligent and practical effort by the department can do to develop it. The greater facilities for shipping, the improved accommoda-tion provided by the different steamcompanies, the excellent work ship done by the minister of agriculture last summer in England, to interest importers in our goods, have created opportunities for trade better than ever existed before, but as Mr. Fisher pointed out to the committee: "All these improvements must meet with comparative defeat in attaining the object in view, until our own apple producers and packers, right here at home, adopt an honest system of grading and pack-The vast market for Canadian apples in proper quality and condition in Great Britain is indicated by the fact that that country imports apples to the value of \$7,700,000 an-

The annual report of the interior department, which has been brought down this week, contains abundant evidence of the splendid progress which has been made in settling the Northwest in the past year. In no particular is this more clearly shown than in the figures relative to the taking up of land for the development has been very marked. In 1897 the number of homestead entries was 2,384, comprising 381,440 acres, and the number of acres sold 22,336; in 1898 the number of entries was 4,848, comprising 775,680 acres and the total number of acres sold 47,-186. The number of homestead entries

granted during the past year is the largest since 1883; it is over twice as

large as the number granted in 1897, and

over three times that of 1896. While

there were 1,707 entries canceled in 1892

and 1 294 in 1893 the number of cancel-

ations has fallen this year to 155, or 3

PROGRESS IN THE WEST.

per cent, as against 32 per cent three years ago. Similar results are to be seen in the statement of land sales by railway companies having government land grants, and by the Hudson's Bay Company. In 1896 the number of acres sold by these organizations was 108,016, and the amount paid \$361,338, in 1897 the figures were 222,545 and \$719,336, while in 1898 they increased to 473,789 and \$1,-354,908, respectively.

FRATERNAL SOCIETIES.

The fraternal societies' insurance bill, which has been introduced by the minlater of finance, has met with an unexpected obstacle in the form of a protest from the Ontario Government that the proposed act would be an infringement upon provincial rights. It is contended that the matter in question is simply one of property and civil right coming within the legislative authority of the provinces, and governed by the principle that although the Dominion can incorporate a company to do business as of legal right throughout Canada, such company, when incorporated, must carry on its business subject to provincial laws as to many details covered by the bill now before the Federal Parliament. It is not likely that the bill will be pressed at this session, inasmuch as ten or twelve of the most important societies in Canada that would be affected by the act have formally pe-titioned the government to allow the matter to stand until next year, in order to allow the several grand lodges an opportunity to consider the proposed legislation in detail. As the only purpose that the government has in dealing with the question at all is to place fraternal societies' insurance on a horoughly sound financial basis, and to secure full protection to the insured, it is obviously desirable that the well considered views of those most vitally interested should be before the minister for his guidance.

TRAMP EVIL: **HOW TO CURE**

To the Editor of The Advertiser:

There is one thing that I never could rightly understand; viz.: Why railway companies allow tramps and all manner of vagabonds and criminals to ride at will on their freight trains without making the slightest effort to stop them? That this is so, it is scarcely necessary to take time to prove. The fact will be generally admitted. It is not unusual to hear freight brakemen, on returning from a trip, telling how many tramps were on their train. This is the way that the late Marion Brown came to London. All the way from Sarnia hundreds saw him. He got off here and there for refreshment and got on again unchallenged. Finally he came into the city and went up through the yard, lying at full length on a flat car. Not one of the train crew or officials made the slightest objection, but, as if to give us an object lesson in inconsistency, the moment the man began to walk he was stopped, or an attempt made to stop him. If this idiotic custom of allowing all and sundry to ride on freight trains did these people any possible good, I am sure, I, for one, would not grumble, but it is because it has the very opposite effect, that I call the attention of the public to the matter. I firmly believe that this pernicious custom is directly the cause of hundreds of thousands of men being tramps, vagrants, yes, and criminals today who would otherwise be the heads of happy homes, and prosperous families. of a man who finds himself what is called "strapped." There are two courses open to him. He must either work or walk, that is, if he wishes to go somewhere to look for something to turn up like Micawber, he must positively go on foot or stay where he is and go to work. That man will think before he starts out. The very fact that he is lazy will cause him to hesitate and, finally, of the two evils to choose the lesser and stay where he is and go to work and the man is

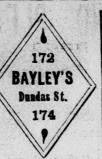

redeemed forever.
Of course, the supposition in the foregoing is that a man cannot set foot on any train unless he pays his fare and has a ticket. Let us take the case of another man under the present regime. On one hand he sees nothing but hard work. On the other he knows that he can ride from Maine to Georgia, from New York to San Francisco almost at will. If the worst comes to the worst he will see the country any

way, so off she goes.

The evils that can be traced directly to this habit of riding on freight trains are so many and so general and far reaching, that it is most extraordinary that an effort is not made by the civil authorities to stop it in some way. It is directly responsible for more than half the crimes that are committed in the country. If a man is about to blow up a safe, rob a bank, or commit any other crime, he is encouraged to go on by the fact that in a very short time he can board the first freight train and be fifty or a hundred miles away by the time the crime is discovered. Whereas, if the man had no means of escaping other than going on foot, it would simply be suicidal to commit the crime at all. This is so self-evident that it is simply incredible that there is not at least an effort made to have it stopped. The worst feature of the whole business seems to be the fact that trainmen seem to be fast becoming completely demoralized by it. They have harbor-ed tramps and criminals so long that they actually seem to consider it their to help them off.

This brings us back to the unfortunate man, Brown. The first we hear of him is he is exchanging shots with a sheriff in Texas. He runs across a field and boards a freight train and, of course, escapes. Now this was in broad daylight. The train crew must have seen him, must have seen sheriff and known all about it. He was not only allowed to remain on that freight train and escape, but was carried from that far corner of Texas to London and from the Sarnia to the farthest corner of Washington by the same means. I leave it to the intelli-gence of the public to say, if this could be done without the willful connivance of freight crews. But the strongest point in this connection remains to be told. The brakeman, on whose train Brown escaped through the tunnel, saw him. This brakeman's attention was called to the fact that a tramp was on the train and to look out. He knew that a murderer was expected to attempt to cross that evening, that he had but one leg. I have his own words for it, that a man of this description crossed on his train, yet he did not "squeal." This is the way these people look at it. This man, if he had stopped the train and had the man arrested, would

have considered it to be "squealing," something to be ashamed of. Now, that there should be something done to remedy this state of affairs is quite evident to every intelligent man. Till there is a stop put to it all your prisons, penitentiaries and even executions are in vain. It is a new evil that has come as the natural accompaniment of railroads, and must be met on its own ground. Old modes of hunting criminals are of no use. course, there will be various ideas and opinions as to the remedy for all this, deep, it continues to run until at least its influence felt at the polls? Suppose

Old out-of-fashioned things at no matter what price won't do these days, and beside, in this age of im provement the newest are always better and cheaper. It's up-to-date styles you demand. That's why we are al ways showing new things.

BLOUSE WAISTS Every new style finds a place here this week. A swell Waist of Ardsley Batiste, latest New York idea. Special \$1 25.

Pique and Crash Skirts, handsomely made and a perfect hanging garment, in flare and flounce styles. See these skirts.

PARASOLS

Very pretty and dainty styles in Fancy Parasols, some trimmed and some with-out. A leader in Ladies' Black Umbrellas at 99c.

SAILORS

Ladies' Sailors, the Knox and other swell American blocks, in all styles of straw braid and very special sailor, good shape.

TRIMMED MILLINERY

This branch of our Millinery has made g eat strides this season. Pretty, stylish Hats at moderate prices always win cus-tomers. A magnificent lot of ready-to-wear Hats at special prices for this week.

HOSIERY

Ladies' and Children's Hosiery. Snap Plaid Hose, all size, in ladies' and chil-dren's. Ladies' Fine Cashmere Hose at 25c, worth 35c. Ladies' Fine Maco, two thread, 121/2, worth 20c.

needed will admit of no discussion. In my humble opinion the only remedy that will do any good is for railroad companies to issue a positive order that any freight crew who is known to allow any man, under any circumstances, to ride on their train, will be summarily discharged, and be un-qualified to act as employes of that road for all time to come. This will cure the whole evil in one week. It is all right for Mr. Railroad Man to sympathize with the poor tramp when it costs him nothing, but when his job is in jeopardy the time will be very much changed. Good-bye, tramp; you will either have to walk or work, then, in downright earnest. By all means let It be tried.

POINTERS ON DRAINING FARMS

Open Ditches and Tile Drains Compared.

To the Editor of The Advertiser:

As the season is now here when farmers will give attention to draining, perhaps a few pointers on that subject will be valued by some of your readers. The particular point I will take up is open ditches vs. tile drains. Open ditches, like clay roads, have done good service, and for the time being answered the purposes for which they were made: but as we get able, we cover our clay roads with gravel. And so with open ditches, a large proportion of them should be turned into tile drains. Some object to doing so, for the reason that they think the flow of water in many cases could not be accommodated in a tile drain. And that is the point I will try to consider. I have observed that one mile an hour is rather more than the average rate for water to move in an open ditch, with even a good fall. The question arises, why does it not run faster? Something must prevent it. Let us see what it is. The grade in an open ditch is seldom even. The water will run in many places quite rapid for a few rods; then it is checked, and loses its force by as many rods of flat or nearly level grade, and so on to the end it does not retain or increase its speed and force. Friction is another agent to retard water, caused by a rough bottom and sides; also grass, weeds, sticks, and stones, and in winter, ice and snow, all do their part to keep the water back. An adverse wind will have a strong effect against it. Also, I think, atmospheric pressure, although I admit I am not scientist enough to state the latter as an absolute fact. However, contrary to all these adverse conditions, all the water has to help it along is the grade, if any, and the back pressure.

Now, in the case of a tile drain, and particularly if put in under the direction of an engineer, the grade is equalized, so that the speed and force of the water gained in one rod is not lost in the next, but it increases in both speed and force up to a certain extent the further it goes. Friction in a tile drain is reduced to a minimum, particularly in a large tile. The water cannot b affected by adverse winds, nor yet by atmospheric pressure. It has a smooth surface to pass over, and has a more concentrated back pressure. And last, though not least, in wet or even moist soil, if the tile is 21/2 feet deep from the surface, there is perhaps from 25 to 100 pounds of water on the surface or soaking through the soil, for every yard-length of drain, trying its utmost to get into the tile, which adds pressure on the water in the tile; so that water in a large tile, with an average grade, will flow at the rate of from three to five miles an hour, taking it even at the lowest speed, and it adds thus to the capacity of the drain. Or I will put it in another shape: An open ditch three feet wide and water one foot deep would contain 432 cubic inches of water; a 12-inch tile contains 144 cubic inches; that area, multiplied by three, is 432 inches. Now, if the speed of the water in a tile is increased threefold it has the same effect as to multiply the area of the tile by three, so that I submit that the waters of an open ditch as large as the above will all pass through a 12-inch tile drain.

But there are other agents worth mentioning in favor of a tile drain. The water in an open ditch will not make much attempt to run until it is from four to six inches deep, and at best it only carries off the flood water, while a tile drain will begin to with only half an inch of water to start it, and being, say three feet

six rods of it on each side are drained dry, that soil a reservoir to contain the next flood while the tile is working it off. Again, tile-drained land is not nearly so bad for freezing. Water will get down to the tile almost any time and be carried off, even in mid-winter.

I must not fail to mention other important agents which nature has provided, viz., fish worms and crawfish, or crabs, as they are sometimes called. These all work in the direction of a tile drain, so that it is a fact the longer such a drain is in the better it works. These natural agents seldom work near an open ditch, the bottom and sides are usually tramped and are too hard for them.

Oh, just another point: Old ditchers will tell you that two lines of tile in one drain will not work unless laid side by side; that a tile will not run without say a quarter of an inch of air in the top; that a drain on a dead line will be a failure, and a lot more such stuff. Well, I have a drain 180 roods long, having a grade of only 1-16 of an inch to the rood; there is a six-inch tile in the bottom and a fiveinch on top. I bottomed a large pro-portion of that drain myself, and it is done right, and works splendidly and at flood time both tiles run full. Pshaw! The idea of a tile requiring air in it to make the water run. Do your city water pipes have air in them? Will a syphon run better by them? Will a syphon that having air in it? But if the old fogies having air in it? Hurts no person, think differently it hurts no person, Yours and, perhaps, pleases them. Your truly.

A. C. ATTWOOD.

SENATE REFORM

To the Editor of The Advertiser: It has been repeatedly said the present government has no mandate from the people to reform the senate; but 1 think the result of the election in Brockville refutes this. But would a joint vote upon questions where the senate and commons are antagonistic be the best method of reformation? I have long since thought of giving to the readers of The Advertiser the rudimentary outlines of an entirely different plan of remodeling our upper legislative chamber, but was deterred by lack of confidence in my powers of expression; but certain productions upon deer-shooting have put the matter in

another light, and I, as our rustic bard sings, "have taken heart of hope." Our legislative assemblies, as now constituted, are paradoxical. We elect members to the commons to carry out the popular will, and have a nominative and non-responsible power in the senate to prevent them-a satire upon the boasted common sense of the British people. The independence of the senate, as now composed, is advanced by the non-progressives as a plea for its retention. It can, if it deems it necessary, run counter to the popular will. What has it done to bear out this opinion? Vetoed the Yukon railway bill, which would have given hunadian merchants, and Canadian workmen, and added greatly to the revenue of Canada, and quietly sanctioned the nefarious gerrymander and franchise bills. The members have all been appointed to the senate as a reward for party services, or perhaps to stifle independent utterances. As a matter of gratitude, they are morally bound to support the party, which gave them the position. Can they, who are strongly partisan prior to their appointment, cast aside party affiliations and take an independent course? Let me make an appeal to our Conservative friends. The senate at present is largely Conservative, but if the Liberals remain in power 15 or 20 years (which they are not unlikely to do, unless men of efficiency should emerge from the ranks of the Conservative party and supplant the present leaders), if the present system is retained, will be largely Liberal. Will it, then, be so acceptable to them? Will it in reality be of advantage to the country-the measures of a Liberal government sanctioned by a senate preponderatingly Liberal? If we must have these barnacles attached to our legislative machinery to impede its course, let us have the most improved

I would suggest that the reform be made along the following lines: Abolish the present senate entirely; to be succeeded by a senate purely elective. Let a committee of high court judges be appointed to divide the country into senatorial divisions, with 100,000 as a basis of representation; the members to be elected for fifteen years, eligible for only one term, and to receive a fair remuneration for their services. The first elections only to be held simultaneously; after that, when a vacancy occurs the new member to be elected for the full term of fifteen years and thus avoid the great excitement of a general election and the attendant loss to our business terests. (This principle might be introduced with advantage into more of our governing bodies.) This method would insure a senate with a narrow majority for either political party, and upon a crucial point a few independent men would hold the balance of power; whereas at present the independent men are swamped by the party hacks.

Sir J. Bourinot favors a senate, partly nominative and partly elective. He holds the opinion some of our universities should have the privilege electing members. To what institutions would he extend the right? Where would he draw the line? If they are a source of power in the country, can not that power, derived from superior learning, appeal to the people and make

we allow a few educational institutions to elect members to the senate, will there not be a clamor from the others to secure the same privileges? All our theological colleges would want representation, and but let the prelates get in the thin edge of the wedge and they will drive it home to the sorrow of the people, and Canada will become a second edition of Great Britain under the thumb of the ecclesiastics. Let the people rule.

ROBERT MURRELL.

POISONOUS MEDICINES

Headache Powders Led to Pretty Anna Vogt's Death.

Detroit, May 23.-Eight weeks ago today Anna Vogt, a beaut oul young woman who was born and lived all her life at 521 Congress street east, was suddenly taken ill. Dr. John E. Clark, of 18 John R. street, was called to attend her. She became worse, however, and Dr. George E. Clark and Dr. Chapoton were summoned for con-

The three physicians decided that the patient had dropsy of the heart. Dr. Clark learned that his patient had been in the habit of using headache powders for a long time. In fact, she had been troubled a great deal with terrible headaches and she always resorted to the use of powders. Friday the patient died, and yesterday she was buried in Elmwood Cemetery. Before passing away Anna talked about her use of powders and said that she supposed that she had used them too

frequently.
"She talked about it to us, and though I have had terrible headaches since her death I could not be induced to take a powder of any kind," said Miss Ida Vogt, Anna's sister, to a reporter this morning. "I will never in all my life take a headache powder again.

Dr. J. E. Clark said this morning that, in his opinion, Anna Vogt's death was due almost directly to the use of

headache powders. "It is a matter of common knowledge that headache powders have a bad effect upon the heart," he said. "This young woman had been using headache powders long before her sickness, and I believe the powders induced the condition of her heart that caused her death."

The Vogt family is one of the best known and most highly respected on the east side. They have lived at 521 Congress street east for something like

The deceased was a very popular young woman, a member of Christ Church on Jefferson avenue, and had for years been employed at Newcomb, Endicott & Co.'s store.

LAKE SHORE.

Lake Shore, Bosanquet, May 23 .-Lewis Cloud passed peacefully away, dreds of thousands of dollars to Can- aged 79, at his home on Kettle Point reserve, May 19. He was often in his lifetime spoken of as one of the very best of the Indians on the reserve. He came here about the time of the American war, and had been long known as a working Christian, and often preached to the Indians in their own language. He was a Methodist, and was much esteemed by the Episco-palian Indians, and also by his white friends. He leaves to mourn his loss his aged widow and several children and grandchildren. The funeral sermon was preached by Rev. Mr. Bartlet,

interpreted by Mr. Milliken. Miss Lizzie Johnson, of Kettle Point reserve, lies very low, but seems to have taken a turn for the better. Miss Hattie Shanaw, of the same reserve, is down sick with lung trouble.

Fall wheat is not doing well in general. Several farmers are plowing it out. The Congregationalists have opened

the church again for service every Sunday evening, and Sunday school at 10:30 a.m. The student-pastor, Mr. Drysdale, seems to be much liked by everyone.

LIFE SAVED-Mr. James Bryson Cameron writes: "I was confined to my bed with inflammation of the lungs and was given up by physicians.
A neighbor advised me to try Dr.
Thomas' Eclectric Oil, stating that
his wife had used it for a throat trouble with the best results. Acting on this advice I procured the medicine, and less than half a bottle cured me;

to a trial, as I was reduced to such a state that I doubted the power of any remedy to do me good. When a woman sees the doctor's buggy next door she is one part sym-

I certainly believe it saved my life. It was with reluctance that I consented

pathy and three parts curiosity. A DINNER PILL-Many persons suffer excruciating agony after par-taking of a hearty dinner. The food partaken of is like a ball of lead upon the stomach, and instead of being a healing nutriment, it becomes a poison to the system. Dr. Parmelee's Vegetable Pills are wonderful correctives of such troubles. They correct acidity, open the secretions and convey the food partaken of into healthy nutri-They are just the medicine to take if troubled with indigestion.

The giddy girl makes a merry companion, but a sorry wife.

Bismarck's Iron Nerve Was the result of his splendid health. Indomitable will and tremendous energy are not found where Stomach, Liver, Kidneys and Bowels are out of order. If you want these qualities and the success they bring, use Dr. King's New Life Pills. They develop every power of brain and body. Only 25 cents; for sale by W. T. Strong & Co.
