Many inquiries are afloat regarding the hay crop and alleged shortage. The Hay Journal says that there is hay in the States of Wisconsin, Minnesota, Nebraska, Northern Iowa, Dakotas. There is, however, not enough there to make abundance of feeding hay for the market. Tame hay will be a luxury for the next year or more. Prices for good hay have been lower during the last year than for thirty years before. Many engaged and just starting in hay agriculture were inclined to reduce the acreage of hay during the spring of 1895. It does not look now as though there would be an over production of hay for years to come. The hay crop in Illinois last year was valued at \$23,000,000, grown on 2,500,000 acres. Iowa had nearly 5,000,000 acres in hay, valued at \$25,000,000; Indiana had 2,000,000 acres in hay; Iowa had 2,500,000

acres of hay; Michigan 1,750,000 acres; Wisconsin 2,000,000 acres; Nebraska 1,000,000 acres; Kansas 3,500,000 acres. The average last year was about one ton per acre. From the reports and information we have the crop in all of these States will not be more than one-fifth of a crop. The total number of tons produced in the States named amounted to nearly 20,000,000 tons. The shortage will amount to 16,000,000 tons. Missouri and parts of other States where the drought prevails are not included in the above estimate. The value of the hay crop in the States named amounted to \$152,000,000. If there was a half crop the value might be kept up by the increased price caused by scarcity. Where the percentage of scarcity is so great the value of the hay crop to the commercial world is almost extinguished.
