

The "International Limited"

predetermined speed is attained the dynamo automatically switches over from the batteries and thereby gives out the necessary supply for the lamps and fans, etc., and so neatly is this operation performed that it is impossible to detect by the lighting that such a change has actually taken place.

The system used by the Grand Trunk in its new equipment is the same that was installed in the royal train of the late King Edward the Seventh.

The Pullman cars operated on this train are some of the finest that this well-known Company turns out. They are of the most modern type, and include drawing rooms and smoking rooms. The rooms have toilet facilities with hot and cold water. The bodies of the cars are beautifully finished, the woodwork being in the most costly material. The ceilings are exquisitely decorated, the upholstery and draperies being of the finest and in harmony with the finish.
