

seen in the camp. No work at depth has been done, but under the efficient and energetic management of Mr. H. Z. Brock, of Hancock, Mich., this defect is in a fair way of being overcome. Since the first of April, roads and trails have been made, several substantial and commodious camp buildings have been erected, a 100 H.P. electrical power plant has been

The Sunset Group at the head of the creek, has some very high grade silver-lead ore. It is under bond to parties who are driving a tunnel, now in 50 feet. The Golden Cache, near the mouth of the creek, has a well defined vein of good looking material in place on which a tunnel is now being driven. A large number of new locations have recently been made.

RUBY SILVER AND BOYD CREEKS.

Traceable on the surface from Ruby Silver Creek across Goat Mountain to Boyd Creek is a vein of galena ore some 25 feet in width. The vein is well mineralized throughout, and while there has been but little work done, it is known to contain payable shoots of ore. The Goldsmith Group is the principal property on this vein.

Two galena prospects of good repute are the Glen-gary and Kootenay Chief at head of Boyd Creek.

Ore Dump, No. 3 Tunnel, Eva Mine.

installed, and three electric drills are now in successful operation driving their respective pieces of work ahead, in obstinate ground, at the rate of 4 feet per shift of 8 hours. The camp is lighted by electricity, and has other handy conveniences which its excellent water power makes possible at small cost. The company has secured a half interest in the Gold-fields townsite at the foot of the claims, and in 12,000 acres of splendid timber land bordering Fish River. A 10-stamp mill and a saw mill have been ordered and are probably now in transit.

Adjoining the uppermost claim of the Camborne Group on the northwest is the Independence, with a large showing of free-milling and concentrating ore on which a tunnel is now being driven.

Of the other numerous claims located on every side of the Camborne, the Canada-Strathcona and the Cedar Grove and Trust Groups may be selected as being most worthy of mention. Each of these have good veins of quartz.

SCOTT CREEK.

On this creek, a few miles north of Menhinick, the Lost Cup has a good vein of likely looking quartz and iron, and above are the DeBeers and Swamp Angel Groups, with large showings of quartz and galena.

Menhinick Creek Falls, Camborne Group.

FISH RIVER SLOPE.

Between Pool Creek and Lexington Creek are several properties with good showings of free gold
