G. MACINTYRE, Renfrew P. O. and Stn.

ROCK SALT for horses and cattle, in ton and car lots. Toronto Salt Works, Toronto

The Economical Use of Wheat Screenings.

With the prime object of drawing attention to the use of wheat screenings, which bulk so largely every fall in the wheat marketings of the West, a member of the staff of "The Farmer's Advocate and Home Journal," Winnipeg, visited Port Arthur, Ont., last winter, and looked into the methods there followed. The result of his gleanings was reproduced with illustrations in our London edition.

During the past winter several schemes for fattening sheep on the by-product of elevators has been tried, and with entire success. The fact that on the American side there were feeders of sheep willing and anxious to buy screenings, and pay freight and duty on them, suggested that there would be an even larger profit in feeding these screenings at home. Indeed this has been done from time to time in the past on a small scale, some man near an elevator, or owning one, getting a car of wethers and finishing them through the winter. Two more experiments were carried on at Port Arthur and Moose Jaw. Port Arthur was selected as having the advantage of being near the great terminal elevators, where screenings are plentiful, and Moose Jaw as a point where screenings were to be obtained and yet which was quite near the range country where the sheep are raised.

The following lucid description of the Moose Jaw experiment thus detailed by Miss E. Cora Hind, Commercial Editor of the Manitoba Free Press, should be of considerable interest:

SHEEP FEEDING.

The full results of the Port Arthur experiment are not yet known, but the sheep and lambs, after 100 days' feeding, were nearly all marketed in Toronto at \$6.70 per cwt., almost the highest figure that has been made on that market.

During the present month, a Free Press staff correspondent spent a day at Moose Jaw looking into the results obtained at that point. The scheme has proved so profitable as to give results that are almost startling. The gentleman who was mainly interested in the scheme was Mr. Grant, and he was not in town on the day of the visit, but Mr. Annable, who has watched the experiment closely, and had access to the books, furnished the following figures:

WHERE THEY WERE FED.

The point selected for feeding was the valley just south of the town, the high hills forming an excellent wind-break to the north and west. Here sheds were erected with accommodation for 4,000 or 5,000 sheep. Unlike the sheds at Port Arthur, they were closed in and had a good roof; they were not floored, but were furnished with automatic feeding troughs and plenty of good water.

During the first week of December, 1905, some 3,000 sheep were landed in these sheds. They were a mixed lot, composed of yearling and two-year-old wethers and ewes, and a percentage of ewes that were three years old.

THE RATION.

The ration provided for them was screenings, a very small allowance of hay and plenty of water. No salt is needed in that section, as the small amount of alkali in the water seems to take its place.

During the winter three men were employed about the sheep, two at the sheds to tend them, and one to purchase feed, see to its delivery, etc., and finally to market the finished product.

The sheep were shorn during the month of March, and were all marketed between April 15th and May 15th. During the last month or six weeks of the experiment, the supply of screenings that had been purchased at \$6.50 per ton gave out, and oats at 25c. per bushel were substituted.

The sheep were contracted for rather late in the season, and cost, landed at Moose Jaw, \$5.25, so that the sum would stand something like this:

3,000 sheep at \$5.25	\$15,750
Screenings and oats, average 75c. per head	2,250
Hay	250
Three men at \$50 per month each for 5½ months	825
Depreciation of buildings, etc.	250
	\$19,525

Or sheep ready to market cost an average of \$6.40 each.

RETURNS.

Fleeces of 3,000 sheep, after cost of shearing and marketing, averaged \$1.00 per fleece, or \$3,000; sheep ready for sale averaged 124 pounds in weight. All sheep sold to Moose Jaw butchers (about half the entire number) brought 7c. per pound, live weight. The balance brought varying prices, so that Mr. Grant, by striking an average, found that each sheep netted \$8. This, with an average of \$1 each for the fleeces, brought the selling price to \$9 each, or \$27,000, or a profit of \$2.60 per head, or \$7,800 for the season's work.

In all of this, nothing has been allowed for cost of erecting buildings. Mr. Annable stated that Mr. Grant had been offered an advance on the land which would cover the cost of buildings, but even if they were entirely paid out of one year's earnings there would still be a handsome margin of profit.

No difficulty whatever was found in securing a market for the sheep when finished. It is difficult to imagine any enterprise where it would be possible to secure the same return for the capital invested.

The gentle baa lamb as a safe and profitable method of disposing of screenings can hardly be surpassed.

GOSSIP.

TWO BREED SOCIETIES INCORPORATED.

The Red Poll and Aberdeen-Angus men, having formed breed societies, have now been incorporated under the Live-stock Records Act at Ottawa. The registrar for each breed is J. W. Nimmo, Ottawa, to whom registrations should be sent. The secretary pro tem. of each society is George H. Greig. The following are the officers, for Red Polls: President, H. V. Clendinning, Harding, Man.; Vice-President, R. E. Barkley, Westholm, B. C. Directors—W. A. McComb, Beresford, Man.; W. J. Garbie, East Clover Bar, Alta.; J. T. Maynard, Chilliwack, B. C.; J. T. Dantrich, Shoal Lake, Man.

BUENA VISTA SHORTHORNS, OXFORD DOWNS AND YORKSHIRES.

Four miles west of the town of Harrison lies Buena Vista Stock Farm, the property of Mr. J. Cousins & Sons, breeders of Shorthorn cattle, Oxford Down sheep and Yorkshire hogs. The Shorthorns number about 35 head, and are all descended from the cow, Maid of the Mist 4th, Vol. 15, by Midland Chief 16429, dam Maid of the Mist 3rd, by Duke of Holkar 11704, and traces to Imp. Princess. They have been continuously Scotch-topped, and are an exceptionally large, well-balanced lot of cattle that are money-makers from both ends. Only one of them, Lady Dufferin, has ever been tested, and she made 15 lbs. of butter in seven days; and last year at the factory, this herd stood 10 points ahead of any other herd supplying milk, in percentage of butter-fat. The younger ones are all the get of the Nonpareil-bred bull, King Cole 28459, by Imp. King James, dam Nonpareil 42nd, by Imp. General Booth. Individually he is an extra well-put-up bull, and was proven a grand sire. The bull lately purchased as a herd-header is Baron Brave, a son of Imp. Baron Cyprus, dam Ida Moor, by Imp. Lord Kintore. He is built on prizewinning lines and should be a sire of worth. At present for sale are a few young females. The Oxford Downs have nothing to be desired in size, form and covering, and the season's crop of lambs, by Imp. Hampton Hero 4th, are showing phenomenal growth. All told, there are about 100 head in the flock, a rare nice lot they are. For sale at present are 2 shearing rams and a few shearing ewes. The Yorkshires are of the well-known Brethour strains. The stock boar is O. L. Provost, by O. L. Conquest 7th, dam O. L. Prudence (imp.). He is a massive fellow, of great length and depth. The brood sows are a grand lot, true to type and standing on perfect legs. Mr. Cousins reports the demand for pure-bred stock the best in their experience, and said he made five sales in one day—the result of his advertisement in "The Farmer's Advocate."

Sharple's TUBULAR CREAM SEPARATORS

21 POUNDS MORE BUTTER PER WEEK

Barnesville, Ohio, June 29, 1906: We were milking ten cows May 19. That day we took a Tubular separator for trial. We used it one week and got 86 pounds of butter that week. The week before we used it we got only 65 pounds. The week after the agent took it away we got only 64 pounds. We felt we ought to have it. Later we arranged to buy it. We recommend the Tubular to anyone interested in cows. It surely will pay any one to buy a Tubular. (Signed) LONA and C. W. ACORN. Write for catalog Y-193. It explains fully.
