FALL PASTURES.

Fall pasture is very important for the stock farmer. If the stock, have plenty of pasture they go into the winter in prime condition and go through the winter in better flesh than if the pasture had been scant and they had started into the winter in a poor condition.

Orchard grass makes good fall pasture. It may be sown in September, after the wheat is sown, at the rate of fifteen pounds to the acre; but if you have neglected to sow grass seed with a view to fall pasturing, sow some quick-growing plant.

In August, sow a patch of rye. It will make pasture until freezing weather comes, and then be an early pasture in the spring.

For hogs, sheep and beef cattle, rape makes a good pasture. If the land is reasonably rich, it makes a large amount of feed, and will be found profitable sown on thin land if well manured. I prefer to put on manure after the land is plowed, then harrow it in well, and sow about three and one-half or four pounds of seed to the acre and harrow it in. If the season is not too dry, the rape will be ready to pasture in six or eight weeks. June or the first of July is the proper time to sow the seed. Do not turn in on it when the dew is on, and it is best to turn the cattle on the rape pasture when they are almost filled with grass, and leave them in only about half an hour the first day, gradually increasing the time until they can eat it at liberty.

If the stock are kept off when it is frozen until after it is thawed out well, it does not hurt it so much to freeze, but if bedewed when frozen, it will turn dark and is then worthless.

If rape is sowed in the spring and kept until fall for pasture, it will be bathery and not so nutritious, and the stock will not eat it so well as when put on it while it is tender.

Lambs may be fattened on it for market with no grain feed at all, while hogs should have slop and some grain to finish them for market.

Prospects poor for N. B. farmers.

Backward and Rainy Season Will Make Light Crops.

Reports on the state of the crops would seem to indicate that 1907 will be a poor year for New Brunswick farmers. The hay crop is light, grain it is feared will not mature before the frost arrives, and while potatoes are reported to be a good crop the price has now fallen to \$1 a barrel. There are indications that this will also be an off year for apples.

The fine weather, which prevailed last week throughout the province generally was very welcome to the farmers, as it gave opportunity for progress with the harvesting of the hay crop, which has been retarded much this season by the wet weather.

A great deal of hay was placed in the barns during the week.

Reports, however, from up river say the hay crop is exceptionally light. Large tracts were winter-killed and the cold backward spring prevented growth. In June there was too much cold weather and not enough rain. The wet weather of July and August aroused hopes that the crop would strengthen up, but reports say that the yield is very light, and in some places a famine is anticipated.

The intervals, the product of which many farmers depended upon for their supply, have been covered with water for the last two or three weeks, the situation in some quarters appears to be serious.

There is grave danger that the grain crops, being late, will not mature until the frost sets in and prevents further ripening. Fields of oats which in average years would be whitening at this time are still in the green or milk stage, and if frost comes as early as usual the prospect of a short end grain crop will be realized. The late spring and the absence of warm sunshine during July are given as reasons for retarded development.

Potatoes are said to be a good crop though there is great danger of rust. Last week large quantities were brought down on the river boats and the supply was greater than the demand. The price fell to \$1 a barrel and on Saturday large shipments at the May Queen warehouses could not be sold even at that price. The prices in the American markets have been falling and if the Ontario market fails the Carleton county farmers who have increased their potato output enormously will, it is thought, be in a bad way.

Farmers say that this is an off year for fruit and that the apple crop would be small even if the frost had not blighted the blossoms, which was the case in some sections of the country.—St. John Times.

GIVING AWAY YOUNG TREES.

About ten years ago I was in Virginia during the apple gathering season. Barrels were scarce in the region, every cooper shop and every cooper was working night and day to supply the demand for barrels, while men were scouring the mountains for hickory poles with which to make hoops. Nearly all these barrels were then hooped with hickory poles.

Commission men buying apples sent to other States and barrels were hurried into the apple region in vast numbers. I saw an entire train of forty cars arrive upon one occasion which was entirely hooped with hickory hooped slack barrels—three hundred and twenty barrels to each car, and ten hoops on every barrel. Here at one time were seen 12,500 barrels, for which there had been sacrificed 64,000 living hickory trees.

In a few years time these trees could have been capable of supplying 25,000,000 carriage spokes, the price of which now, \$35 a thousand, would realize \$875,000.

The farmers who permitted this sacrifice of cutting out the young hickory which had made rapid strides toward salable lumber trees received for this train-load of their trees less than \$400.

VENTILATING BARN WITH MUSLIN CURTAINS.

(Dr. E. M. Santee, Federal Dairy Expert.)

I would like to ask if Dr. Santee would advise me whether his idea of dairy barn ventilation (muslin curtain method, recently described in The New England Homestead) would be advisable here in Annapolis county, Maine, where the thermometer often drops down to 20 degrees below zero.—O. M. H. Sherman, Maine.

The correspondent would have no trouble in using the muslin curtain as a ventilator for his dairy barn even in so cold a country as northern Maine. I have 2 square feet of cloth for every 1,000-pound cow in my own stable at Cortland, N. Y., where we have a temperature this winter of 42 degrees below zero, and we had no difficulty whatever in keeping the temperature above the freezing point, even during the worst weather. Once, for a very short time, the temperature went down to the freezing point, but not long enough to even turn a sum on the water in the stable. The curtains usually give a temperature about one to two degrees lower than that of the stables containing glass windows.

At the advantage of the elevation of moisture, which the curtain accomplishes, many times compensates for this difference in temperature, as there is an absence of the chill that accompanies the moisture in a cold stable.

We have experimented with different amounts of muslin per cow from 1 square foot to 3 square feet and find that 2 square feet gives the best results. This system has been adopted by many dairymen in central New York, whose the temperature goes very low and the reports are universally favorable, so I have no hesitation whatever in recommending it for any attitude where cows are kept.

I am in receipt this morning of a letter from Harry B. Winters, president of the New York state experimenters' league, in which he says: "There are 140 head of cattle in my barn and the ventilation is very satisfactory indeed. We have had plenty of nights during the past winter when the temperature was 20 degrees below zero, but this barn has been perfectly comfortable. We have no recording thermometer, but I believe the temperature would not be over three or four degrees warmer if the muslin curtains were taken out and glass put in. This is the part that surprises me—how we get so much good ventilation with so little effect on the temperature, even in the coldest weather. I regard muslin curtains as perfectly practicable for any farmer. It is probably fully as cheap to cover the windows with muslin as it is to keep the glass windows in a clean and neat condition."

"Made in Ontario"

Labor vs. Capital.

WASHINGTON, August 22.—Following the suit of President Van Cleave, of the National Manufacturers' Association, for an injunction the American Federation of Labor, President Gompers said today that probably the federation would bring a counter suit against the Manufacturers' Association, charging that body with conspiracy.

"We have learned," said Gompers, "that Mr. Van Cleave has been instigated by the direction of the Manufacturers' Association, which met in New York recently and decided to raise a fund of \$1,500,000 to crush out organized labor."

"If Van Cleave expects us to surrender the rights that cost centuries of struggles by the people, he is mistaken in his men. We know we are within our legal rights and we propose to exercise them, regardless of personal consequences."

"I am strong in my conviction that when it comes to the test of surrendering my rights as an American citizen or surrendering to an injunction at the courts, I shall not hesitate to exercise my rights."

"The men behind the injunction proceedings are pitting their millions of money against human hearts and minds and to the long run the hearts and minds will win."

President Gompers said the federation had communicated with eminent lawyers, but did not announce their names until they agree to act as counsel for the defence.

Verdict Against Railway Company

WINDSOR, Ont., August 23.—The coroner's jury at the Essex explosion inquest, after being out nearly three hours, brought in a verdict to-night holding the Michigan Central railroad responsible for the accident. Assistant Superintendent H. Adams, of the Michigan Central, admitted in his evidence that explosives had been carelessly handled, but he did not think there had been intelligence on the part of the railway employees. The movements of the car containing the dynamite were traced from the point of shipment to Essex by the railway employees subpoenaed for the purpose and it was shown that the explosives had been allowed to remain in the railway yards for many hours waiting the arrival of a crew from Amherstburg. It was during this time that the hot weather brought about the leaky condition of the dynamite which caused the explosion. During the investigation, a box of dynamite packed in the same manner as that which caused the explosion was brought into the room where the hearing was held, and Frederick Julian, expert of the Pluto Powder company at Blackrock, opened the case and took out one of the big dynamite cartridges for the jury to examine. But nobody would touch the stuff and most of the spectators fled from the building until the dangerous stuff was carried out. The verdict against the railway company caused no surprise in view of the fact that ever since the explosion claims agents of the Michigan Central have been in town making arrangements wherever possible for a quiet settlement with those whose property was damaged.

REAL ESTATE

FOR SALE

In Bridgetown, nine room house, finished complete with piazza. Bars 22 x 38, wagon house and outbuildings. Half acre of land with about 100 trees, apple, pear, plum.

Will be sold cheap, on easy terms, or will exchange for farm.

W. AYARD MARSHALL
Bridgetown, July 17th, 1907.

EXECUTOR'S NOTICE.

All persons having legal demands against the estate of the late David Hertz, of Inglisville, County of Annapolis, are requested to render same within six months from date thereof. All persons indebted to the said estate are hereby requested to make immediate payment to
