

Heavy Cream

Mr. J. W. McGhee, of Conover, Ont., says: "I find that the Standard Cream Separator will deliver any density of cream with either warm or cold milk, and still flush out easily." So if you want heavy cream, simply turn a screw on the top disc of the

Standard

and get any thickness desired. This cream-regulating screw is placed on the top disc for your convenience, so that you do not need to take the bowl apart to reach it. This point may not seem very important to you. We mention it merely as an example of how carefully and thoroughly the Standard is built down to the smallest detail. A booklet explaining the entire construction of the Standard Cream Separator and telling why it has earned the name of "The World's Greatest Separator," will be mailed free as soon as we get your name and address. Drop us a post card to-day.

A NEW PAYING WRINKLE IN SILO BUILDING

In building a 30-ft. cement silo the last 10 ft. or so handling heavy concrete at a considerable height and under unfavorable conditions requires skilled labor and costs more in time and trouble than the rest of the job put together.

Cut down building expenses and save yourself this hard work by using Waterous Steel Silo Plate in place of concrete at the top of your silo.

Waterous Steel Silo

Plate is shipped to you rolled, punched, and marked for quick erection. Sheets are 4 ft. high and are rolled to 10, 12 and 14 ft. diameters. The Plate is light, readily handled and easily assembled. You and your own help can put it up in a few hours.

Waterous Steel Silo Plate is durable. It is storm, shrinkage and frost proof, and is made absolutely to standard size so that you can add a course at any time.

Prices are exceptionally reasonable—the plate for a 12-ft. section will cost you no more than will cement and gravel alone for the same amount of concrete work.

Before building that Silo remember the new wrinkle in silo building, and ask for prices on Waterous Steel Silo Plate.
