Thirty Feet of Danger

The intestinal canal is an important part of every individual, important every inch of its thirty feet.

The upper portion of it is intended for the di-gestion of food and absorption of its useful portions. But the lower part is concerned with the elimination of waste materials.

It is, in other words, the great sewer of the body. The more food eaten the greater the waste. If a sewer becomes clogged up, its contents stagnate and be-come more and more dangerous.

Constipation means more than failure to evacuate the bowels regularly and thoroughly. It means stagna-tion, increased fermentation, putrefaction and germ action. Increased amounts of irritating and poisonous substances are formed. Absorption of these into the blood follows. Self-poisoning results.

Danger, disorder, disease, or even death follows.

Pills, purgative mineral waters, castor oil, salts, etc., do not cure constipation or prevent its consequences. They make it worse because they do not only irritate the bowels, but they "we: out" in effect and so must be taken in increasing doses, making constipation a habit.

But the Nujol Treatment for constipation overcomes constipation by helping Nature re-establish easy. daily, thorough bowel evacuations as "regular as clockwork."

Nujol prevents stagnation and self-poisoning. Nujol forms no habit, except a natural, healthy habit.

After Nujol has trained the bowels to act, it can be dispensed with.
