

Stump Pullers, Tree Pullers, House Movers, Etc.

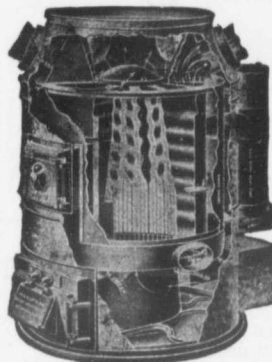

Contractors will find it very much to their interest to investigate the celebrated Swenson Malleable Stump Machines which are sold on a guarantee that they will work faster, be easier, and more convenient than any other machine on the market. These are made in 5 different sizes so that it does not matter whether your contract is through the heavy fir in B.C., the big pines in Ontario or the small bush, we have machines adapted for the purpose.

The Kelsey Warm Air Generator

The main reason why the Kelsey has been successful in giving over twice as much warm air as any other heater with the same area of grate surface is based on the construction of:— The Zig-Zag Heat Tubes or Sections — The Tubes have large heating surfaces. They warm large volumes of air in separate currents. They can be capped in groups to heat distant rooms.

Strongly endorsed by leading architects, physicians and heating engineers.

Kelsey Booklet sent on request.

3 sold 1889
32,000 in use to-day
Made in 6 sizes
5,000 to 100,000 cubic feet heating capacity

CONTRACTORS

"If in doubt, **DON'T**"—Don't use untried brick or brick that has been tried and found wanting, for the purpose of saving a dollar or two per thousand.

You may get paid for your work because the architect or owner is "fairly well pleased" with it—but that is not the way to have architects recommend you to their clients or prospective builders who enquire as to "who built that house?"

If you do good work and have good material to work with you can rely upon someone interested in effect finding out that you did it—and the chances are they'll want you to do some for them.

Canada has developed sufficient wealth and taste to justify good contractors in using only the best material and employing only the best workmen.

Far-sighted contractors will realize that some day, if they have not already done so—and be the gainers.

The great element in building, as shown by the report of Toronto's City Architect, is brick; so brick must be the most important to consider.

On account of firm density (ensuring dryness), strength and color, **MIMICO RED PRESSED BRICK** and the new "**PANEL FLASHED**" stand by themselves.

"If in doubt"—call, write or phone for samples.

And don't forget our Drain Tile—
The strongest made, $\frac{3}{4}$ to 8 inches.
