The more important Total, \$862,000. plants over the camp number 35, with a capacity of over 200 drills. The cost of the combined apparatus, including the O. K. stamp mill, is \$359,500. The following table shows the cost of

the power plants of the larger mines:

Assessment Work For the Year. er's office form one of the most valuable ing circles. The records show that dur- affairs of the company, and a perusal of ing the year just past the certificates of affairs of the corporation. work filed in the Trail Creek office aggregated 1,630, as against 1,211 filed during the previous year. Each certificate represents at least \$100 worth of Prospects company, is in town. The work expended on the property, so that from these sworn affidavits it is shown that the amount spent on the smaller Light group on Forty-nine creek, and claims of the district is at the lowest five men are at work. The shaft is \$163,000, as opposed to \$121,100 so ex- down 65 feet, and four assays returned pended in the previous year. In hundred soft cases, moreover, prospectors are not satisfied with doing shaft to the 100-foot level as soon as the mere work necessary to hold their possible.

claims; they put in further work with the view of developing them properly. This form of development work, scattered all over the country, would increase the official figures by at least 50 per cent, so that it is safe to say that \$250,000 was spent last year on the claims around the camp. Nothing that could be produced which would better show the faith which the locators in properties all over the district have in them, for they would not be expending a quarter of a million dollars in claims which did not

show evidence of real merit. The records also show that during the year just past 160 certificates of improvements were obtained, as against 93 in the previous year.

Development Work in the Camp. The following figures show the amount of development done in the mines of the camp during the year 1897. Wherever possible, official figures have been obtained, and it is believed that the totals are very reliable. "Shafts," in this table, refers to shafts, inclines, winzes and upraises. "Tunnels" comprises not the 500-foot level, while the latter has

drifts as well. The total amount of work carried on in some 64 properties during the past | The Poorman likewise is playing in year aggregated 30,676 feet, divided as luck, and a fine body of rich ore going follows: Shafts, 6,767; tunnels, 23,909. as high as \$200 has been met. This, however, is only a part of the development of the camp, for an addition of 5 per cent should be made to the lead on the Josie, which had been

32.209 feet. Before a grand total of work accomplished in the past year can be obtained Light company expects to be delivering consideration must be paid to the power to the mines here by the first of taken from this tunnel runs \$74.68. amount of work done by prospectors in next month. the development of outlying claims. This, as shown elsewhere, aggregates \$250,000 in value. A true division of milled in the camp was 2,702 tons. Total this sum so as to reveal the amount expended in shafting and sinking would be almost impossible, since no statistics

are available. Calculating, however, that this sum produced 7,500 feet of shafts and 7,000 feet of tunnels, and the recapitulation is as follows:

60	MINING OPERATIONS IN THE TRAI	L CRE	EK DIS
