Mr. Newgolds invention seances, put his hand under the curconsists of a device by which he will tain into the cabinet and came in

of that they regard as extremely doubtful.

At the present moment there is great deal of criticism of the Wright brothers because of the temporary check their infringement suits happened upon exhibition flights if the Wrights country. But that criticism is superficial. From all viewpoints the Wrights are benefactors in human flight, and many of the foremose aerial philosophers are contending to day that in the enforcement of their patents they are performing a server months the machine is to be controlled by the scientific world a thrill by give the scientific world a thrill by demonstrating what he can do with an enormous apparatus he has built university in January last. The cularly in, the south, while to the city they are good, but not so much therefore in the will have professor the professor of physics; Dickinson S. Miller, professor the cult in the south, while to the city they are good, but not so much therefore in the wil day that in the enforcement of their patents they are performing a service equal to that of discovering the first principles of mechanical flight. The effect of their infringement suits is o arrest the manufacture and use of all flying machines similar to their own, and it is generally considered that the Wright bipaine of today is a very crude vehicle in comparison with what we shall have five years hence. The Wrights, in protecting what they are undoubtedly entitled to, are merely forcing others inventors to create form. He manufacture of the first protecting of the residual to the discovering the too tried on the Hudson river in a tew days.

It is lessor of physics. Protessor Trow to develop the first principles of mechanical flight. The first principles of mechanical flight. The effect of their infringement suits is to arrest the manufacture as common as meadow larks.
