Experiments been found in dogs and rabbits and sufficient in many cases to prevent the died of rabies, and that they are not development of the disease. Instead of present in the organs of animals that the nerves, and consequently cauterization may be delayed until there are organisms which produce malaria. facilities at hand to make it sure. So, the wound having been dressed, the ed to determine whether a suspected he has been inoculated, the patient should proced at once to a hospital, and begin the course of treatment. In without observation as to its condition, it is best to take the treatment The plan of using virus of differing rather than to run any chances.

On the age of the patient, the condition of the animal, and the extent and location of the wounds depends to a large extent the period of incubation. Lacerations of the head and face are especially dangerous, those in order next being wounds of the hands. thighs and legs. A large, ragged wound more dangerous than a mere scratch, while when a bite is inflicted through clothing, this clothing seems to filter out a large proportion

of the germs. Right here, however, it should be reembered that hydrophobia is not aused by bites only. A scratch, licked ov an animal suffering from rables. w cause a fatal infection. Like all great inventions the

cers. In tins only, always fresh and erisp. You'll like their flavor, Made by Paterson of Brantford. teur treatment is simplicity itself. In the course of long experiments Pasteur discovered that the infected spinal cord of an animal killed by hydrophobia had the power of producing the disease in healthy animals, but that this power gradually disappeared. If an emulsion be made of the spinal cord of a rabbit which has just died of

Going further, however, the discovery was developed that with the injection of an emulsion made from a cord which had been kept for a day or a week, the rabbit so treated had more chance for recovery. In other words, the virulent organisms may be so weakened and attenuated—even those of hydrophobia—as to become less and ess harmful, and eventually harm-

rabies and that emulsion be injected

into a healthy rabbit, the latter invariably will develop the disease and

Of the various methods of accomplishing this attenuation, the best and dow opposite. Now, the occupant of most simple practice is to leave it to the operation of time. A cord removed at the end of 48 hours is a trifle less nfective than when it first was taken from the carcass, while a cord removed at the end of fifteen days has

ost its power of infection completely. The spinal cords of rabbits dead of the disease are cut in small pieces and suspended in sterile glass jars over caustic potash, which absorbs moisture, and are kept at a uniform temperature of 22 degrees centigrade.

First of the steps of the immunization of the human patient is that of tortifying him, during the period incubation, with inoculations of virus of gradually increasing activity. The inoculation on the first day is made which, being practically inert, does not hurt the patient.

Follows, on the next day, an injection from a thirteen-day cord, when, like a vaccinated man developing an extremely mild case of cowpox, the hydrophobia patient develops an extremely mild and harmless variety of rabies. So mild, indeed, is this case, that he does not mind it, and may exist? Simply to the fact that there is mingle with his fellows in business a nervous disease, called pseudo-hyand pleasure, as though there were nothing the matter.

On the third day, an injection from no human aid can save him. Following an eleven-day cord is given, this containing hydrophobia organisms pretty healthy condition; but this has

By this time fire is, indeed, being fought with fire. So the treatment proceeds pro-

gressively, the injections on each succeeding day being made from emul-sions of greater strength, until eventu-bla at all.

A Bad Stomach

becomes an exceedingly good stomach under the helpful healing of Abbeys Effer-Salt 25c and 6oc a bottle.

A Fire-pot That Won't Crack

HE greatest strain falls midway between the top and bottom of a onepiece fire-pot, because the live coals are located at the centre of the fire. This continued strain overtaxes the expansion powers of a one-piece fire-pot and causes it to bulge out and crack at the centre, and through the cracks, dust and deadly coal gas escape and eventually pass through the reg-

isters. In self-defence, you have to buy a new fire-pot. Every

fire-pot you replace is so much added to the cost of the maintenance of your furnace.

2 Piece Fire Pot

Now, the Sunshine fire-pot is built in two sections, which are joined together with our "famous" cup-joint. Because of the shape

Oil Cement this joint is absolutely gasproof, smoke-proof and dust-proof.

The layer of cement acts as a "buffer" between the two sections and allows each section to expand or contract independently of the other. This feature prevents the Sunshine fire-pot from cracking.

Less than I per cent. of Sunshine fire-pots have been replaced. This

shows conclusively that the Sunshine two-piece fire-pot will save you money, and that's the

CUP-Joint

kind of a fire-pot you want in the furnace you are going to have installed in your new house.

Get the Sunshine—the economical, guaranteed furnace. It's the A1 fur-

degrees of intensity is an improvewith an emulsion of a fifteen-day cord, ment on the original method of treatment, while the examination of brain and spinal cord for Negri bodies is another of greatest importance.

A Pseudo Disease.

Not so many years ago every genuine case of hydrophobia was necessarily accepted as fatal. To what, then, is to be attributed

the belief that hydrophobia does not drophobia, or lyssophobia, which sometimes imitates hydrophobia quite closely.

Lyssophobia is a variety of hysteria. Frequently when a person is bitten by a dog absolutely free from been discounted by the injection of the hydrophobia the patient imagines previous day, and the patient does not that he is "going mad." He froths at the mouth and shrinks from water and gives strong symptoms of hydrophobia. Yet a madstone, or bunch of dog's hair, or some other preposterous "remedy" will "cure" him. As a matter of fact, he has not had hydropho-

from a 48-hour cord. Had this strength States there would be less rabies. In nine cases out of ten the discase is "Do you deny that you have bought original fire would depend for subsistations of headache and failing sight. of a buried village. The most recent discovery of this kind was made by Frank C. Erwin at his home, fourteen miles from Cochise.

Three miles from his ranch Erwin started to dig an irrigation ditch. Only a few cover utensils of a shape and material which indicated that they had been used by a race probably as old as the Cibola, Niza and the negro Estevanicio from the Spanish mission at Culiacan north along the Senora River to the old city of Tabac, near Tucson, which expedition was the beginning of civilization in Arizona.

After digging deeper Erwin came across a wall, which he followed for twenty feet. Further investigation brought to light hundreds of bones well preserved, one skeleton being intact. When an attempt was made to take up the skeleton it fell to pieces. Among the treasures unearthcurious figures representing men and birds and animals. Erwin took several of Kansas City Star.

DO MILLIONAIRES LAUGH.

A rather garrulous millionaire of considerable postprandial notoriety has-confided to the public that millionaires seldom laugh. The statement was received as a negligible pleasantry, whereas it is really a symbolical truth that goes to the root of all our economic and social evils.

That millionaires habitually do not laugh is the most calamitous factor in modern

It is admitted that there may be many nsignificant millionaires who are stil able to sound the clarion of hilarity. But among the larger millionaires, the great captains of finance, to whom we particularly apply the term, the springs of mirth the simplified spelling board at the time, are unquestionably dry. The writer has so that the provocation was undoubtedly had the opportunity to meet and observe extraordinary. The instance does not afmany of these gentlemen, but on only one fect the rule.-Everybody's Magazine.
