

the spruce. From that date to 18th July I took 12 more males and 12 females. The captures of 18th July, a male and female, were taken at the slough by the Forestry Station in the valley, 4,000 feet. The insects were all fresh and some damage occurred to the papered specimens. New to Alberta list.

34-132 *Somatochlora semicircularis* Selys.

At the camp, Coliseum Mountain, in the evening 16th July, I took a male at rest on a spruce. I immediately realized from the general appearance that the insect was distinct from the other somewhat similar species that I had been taking, i. e., *franklini*. Not only was it larger and had a relatively greater wing spread, but the abdomen, flattening to some extent in the process, attained its greatest girth at segments 6 and 7, and tapered again to segment 10, while in *franklini* the most robust segments are 7 and 8, and the reduction in 9 and 10 very slight. I have the specimen in alcohol. *Semicircularis* has previously been recorded from Banff and Laggan.

35-132 *Somatochlora septentrionalis* Hagen.

On the morning 15th July I had been collecting at the sloughs each side of the trail at the Forestry Station. At noon I was knee deep in slough when the Forestry Officer hailed me to come up to lunch. Dripping water, I climbed through the fence, and there in the enclosure I saw a *Somatochlora* flying in the shade of a Jack pine. If I had refrained from taking it from laziness, hunger or politeness, that fine male of *septentrionalis* would never have been captured, and I should not have taken eight different species of *Somatochlora* at Nordegg in nine days. The specimen is in alcohol. New to Alberta list.*

36-132 *Somatochlora walshii* Scudder.

A single female was taken on July 15th on the top of Coliseum. It was mistaken for *minor*, which it resembles very closely except in the form of the vulvar lamina.

Beside the 15 species of dragonflies dealt with, or indirectly

*A female evidently of this species, though differing from the published descriptions and figures of *septentrionalis* in the form of the vulvar lamina was also taken by Mr. Whitehouse on the top of Coliseum on July 12.—E. M. W.
