

GOUGES.

Among all the products of the Indians' handicraft few exhibit more patient labor than do the stone gouges that are occasionally found in ossuaries and on old village sites.

FIG. 64. ($\frac{1}{4}$ Size.)FIG. 65. ($\frac{1}{4}$ Size.)FIG. 66. ($\frac{1}{4}$ Size.)

The material of which they are usually formed is a close-grained stone of primary formation, and capable of bearing a fine edge. Many gouges are hollowed only far enough back to permit of the lips being properly formed, as in Figs. 64, 65, and 66; others, like Figs. 67 and 68, are hollowed the whole of their length.

FIG. 67. ($\frac{1}{4}$ Size.)

Figs. 65 and 66 are from the Baby Farm, Lambton, where they were found by Mr. Kirkwood, an enthusiastic collector; and Fig. 67 is from the County of Victoria, and is
