

Semi-Steel Fire-Pot—Not Gray Iron

A FIRE-POT of a furnace should be able to endure tremendous heat and to repel the attacks of sulphur fumes.

The material commonly used for a fire-pot is gray iron. The Sunshine fire-pot is *Semi-Steel*.

Now, avoiding technical terms, gray iron has what may be called "open" pores. Through these "open" pores the destructive sulphur fumes attack the iron and hasten disintegration.

On the other hand, Semi-Steel is a close-grained ma-

terial, with a smooth-as-glass surface which practically seals or "closes" up the pores. Semi-Steel easily repels the attacks of gas fumes and thus greatly prolongs the life of the fire-pot.

A Semi-Steel fire-pot weighs 20 per cent. heavier than the same size and pattern in gray iron. It is therefore better able to endure tremendous heat.

Semi-Steel is made by an exclusive McClary process. You can only get a Semi-Steel fire-pot with a McClary furnace. That is one strong reason why you should have

the Sunshine installed in your home. Our agent in your locality will tell you many other reasons. Ask him.

Remember, the Sunshine is *guaranteed*, by the largest makers of furnaces in British Empire, to heat your home to your entire satisfaction. 45

DEALERS EVERYWHERE

Make this 60-Day Test of Brantford Roofing—then Test Any Other Make

Write us, or your dealer, for sample of *Brantford Asphalt Roofing*. Place it in water for sixty days. When you remove it, rip open with heavy knife, and you'll find insides—the vital part—perfectly dry, life-like, solid—as *before* test. Just think of severeness of this test! The result is evidence you *cannot* overlook. Then make this test with *any other* Roofing. You'll find the wood pulp—jute or cotton-cloth insides soaked—softened—lifeless. It *cannot* withstand severe weather, which is, at its worst, not *one-twentieth* so severe as *Brantford's* Test. Wood pulp is like paper. It *acts* like paper, when soaked—welts away. How could you expect such a foundation to fight off Roofing Enemies! For resistance, it *must* depend upon animal fat, grease, or other refuse coating, themselves veritable mines of danger. They evaporate—wear off—expose shameful foundation to awaiting enemies. This coating *cannot* prevent penetration—protect defenceless insides from harm. But *Brantford Asphalt Roofing* Foundation is one sheet of evenly-condensed, long-fibred *pure Wool*, with life and body of its own. A *secret* mixture of *Asphalt* is forced into it, soaking every fibre. After mixture dries, foundation possesses resisting-power no amount of soaking or bending can effect.

Brantford Roofing

after special Water-proof Coating, into which Silica Sand is rolled under pressure, is applied, becomes a solid mass of resistance. It is weather, acid, alkali, frost, water-proof. *Cannot* freeze, crack or melt. Wonderfully pliable. Brantford has but one cost—first. Write for free Book and Samples
