Probably the South American continent will be the scene of the attempted expansion, for there already German influence is strong. Highly important in the attempt to form a Greater Germany in South America would be the friendship of the United States. The purposes of Germany would be well served by this alliance: but it is hard to see where the compensating advantages to the American people are to be found. If the expansion is not to be in South America. it is not clear that the friendship of the United States would be of much value in assisting it

Bismarckian Advice.

Harden is strongly anti-Japanese. He frankly declares that the "United States has made the gravest mistake the United States has decreased from by allowing it to become so great 5.8 persons in 1790, the date of the and powerful." The idea underlying first census taken, to 4.6 in the same this opinion is evidently that a nation area in 1900, according to a volume should be quick to discern a potential historical and prophetic. No son of now being prepared by the census enemy, and to crush it before it is strong enough to do any harm. From a publicist who greatly helps to commercially, as made by the leaders mold German sentiment this is a significant remark: and though he of the various provinces, without gaindoes not say it. think Great Britain rather stupid not to suddenly declare war on Germany and annihilate the navy that may one day seek to wrest the supremacy of the seas from her. It is easy to re-cognize the influence of Bismarck's teaching upon Harden, for this is exactly the sort of unmoral politics that ticed as long as he lived. Nor, as we see did it die with him; but is today as strong a feature of imperial German statecraft as it was twenty years ago, when Bismarck wanted to make war on France because she was recovering too quickly from the results of the struggle in 1872. The United States and Japan.

But Harden has confidence that the American people will settle the yellow race problem, because they have settled the negro problem. The danger from Japan will practically cease as soon as the Panama Canal is ready. Then America will be able to resist Japan. Until then, America must be careful." Herr Harden is another choice specimen of German policy. "Never kick a man when you're down," is wise advice, but if he is fool enough not to kick you, express your opinion of him when you get the chance. A man is not less dangerous because he is ignorant, and although Harden supposes that the negro problem has been settled in the United States, his lack of knowledge on the subject does not make him less an authority with his own admirers. Other Germans, who lack his hold. upon the people, can supply his deficiency when precise information is necessary, and Harden can be left to the task of firing the minds of those who are prepared to act on his ad-

Just One Opinion. Were the sentiments to which Harden gives expression those of a courtier who speaks to please the ruling powers, they would not be so significant as they are when emanating from a prophet of discontent whose star is in the ascendant. We suppose, rightly or wrongly, that the feelings of high German officials is none too friendly to Great Britain now; and we find them re-echoed by the man who has been regarded as the most persistent enemy of the ruling clique. Apparently, on the question of Great Britain, be brought from the settlement for rethere is only one real opinion among the leaders of the German people.
