terested him in entomology, and taught him how to observe and collect. This was in 1891. He was, therefore, 56 years of age at the time of his death, though supposed to be a very much older man. He succeeded in collecting a number of rare species, and made many careful observations on the life habits of these and others, some of which have been published in this and other entomological magazines. The last time I heard from him was in February, when he sent me some specimens and a note on the preparatory stages of Arctia virginalis. His untimely death is a loss to entomology, as he was a keen observer and diligent collector in a little-known locality, and had only just begun a work which would have been of great value. He lived all alone among the mountains, and has left neither wife nor child to mourn his departure.

C. J. S. B.

Collas Cæsonia.—In our last issue the capture of this butterfly at Toronto was recorded. Mr. James Walker, of Orillia, Ont., writes: "I saw numbers of Colias Cæsonia flying over a clover field to-day (July 13th). I captured four, two of which were perfect. I had only liberty to walk on the edge of the field, or I might have been more successful. Mr. Grant has also captured five or six."

Mr. E. F. Heath writes, from Cartwright, Manitoba: "On June 19th I captured a rather worn specimen of C. Cæsonia. A few days subsequently I had a distant view of what I took to be another example. On July 10th I chased, but did not succeed in capturing, a fresh-looking specimen, and on the 15th was fortunate enough to take a very good one. I have since seen one or two more. It is not very easy of capture when assisted by a prairie breeze. This is the first time I have noticed the butterfly during a residence in the country of sixteen years."

LIBYTHEA BACHMANI.—Mr. McDonough captured a specimen east of Toronto, in 1895, and one in his garden in the city on the 7th of June last. The only previous Canadian records are Port Stanley, London and Hamilton.

THECLA SHERIDANI.—No less than fifteen specimens of this extremely rare butterfly were taken in the foothills west of Fort Collins, Colorado, at the end of April, by Professor Gillette, of the State Agricultural College, Fort Collins, and Mr. S. T. Mason, of Denver, Colorado.

Mailed August 1st.
