bottles of
16 ounces.

Two Effective Vitamine Preparations

METAGEN

All the known vitamins are present in Metagen, and this fact is demonstrated by physiologic tests on animals. Metagen contains:

Vitamine A (antirachitic)—the fat-soluble vitamine normally present in milk, butter, cod-liver oil and certain plants.

Vitamine B (antineuritic)—a water-soluble vitamine found abundantly in yeast, nuts and the pericarp and germ of grains.

Vitamine C (antiscorbutic)—a water-soluble vitamine of citrus fruits and certain vegetables.

Prescribe Metagen in all cases of vitamine deficiency—rickets, scurvy, malnutrition, marasmus and other disorders of metabolism. It is a valuable adjuvant in the dietetic treatment of tuberculosis, anemia, and the asthenia incident to the convalescence from acute infections.

EMULSION METAGEN AND COD-LIVER OIL

This product exhibits not only the native fat-soluble vitamine of the finest Norwegian oil, but also Metagen—the fat-soluble vitamine from vegetable sources, as well as the water-soluble vitamins.

Considering the pathogenesis of rickets, no available medicament more clearly meets the therapeutic indications than Emulsion Metagen and Cod-Liver Oil—a powerful tonic and metabolic stimulant, containing active concentrates of all the vitamins and an augmented supply of the antirachitic vitamine.

The Emulsion naturally suggests itself as a suitable prescription also in cases of malnutrition, scurvy, and other conditions due to vitamine impoverishment.
