#### The Karmer's Corner. Preparing Potatoes for Planting.

Most farmers are proposing to plant their potato crop as early as possible—partly because of the potato beetle, to get the start of that, and partly to secure the high price.

THE Subscriber as one of the Patentees' of the above Patent is prepared to execute orders for his Freezer and Refrigerator from plans and specifications of Patent entered at the Patent Office, Ottawa, in March, 1874. and partly to secure the high price, which is pretty certain to be had for the first potatoes in market this year. The first reason is not a good THE undersigned referring to the "CAUone. If we are to have the potate beetle in quantities this year the enemy will be with us as soon as the earliest planted potatoes are up, and probably before. As the potato grows slowly, when planted early, this plant will only insure a longer season for fighting the beetles and larvae. But many potatoes will the potatoes are up, the same and larvae. But many potatoes will be got into the ground as soon as it can be done after frost is out, and the best way to forward them as rapidly as possible is worth noting. Potatoes intended to be planted Newcastle, Feb. 27, 1877. tf-28 early should be cut a week or ten days previously, and immediately rolled in gypsum. Newly-cut petatoes in contact with cold, moist are apt to rot, and sometimes B A K E R Y the sprouts will thus be destroyed.
On the other hand, if cut and allowed to dry, the pieces, if small, will sometimes fail from drying out.

THE Subscriber begs leave to inform the inhabitants of CHATHAM and vicinity that he has REMOVED to the Store former-ly occupied by W. Anslow, where he is prepared to supply The gypsum dries the surface of the SOFT AND HARD BREAD, cut so that it will not decay, and at the same time prevents the juices of the potato from evaporating. The potato plant is benefitted by a dressing of gypsum, and the dusting potatoes, is worth more than its cost as a fertilizer, besides the other advantages named above.

early potatoes which sprout badly, the seed tubers should be kept as cool as possible. Pits in the open ground are generally preferable to the cellars under wellings which are often much too warm. The second and each succeeding short from the eye is more feeble than the first, and if sprouted very badly they are almost worthless as seed.—Cor. Country the seed tubers should be kept as worthless as seed .- Cor. Country Gentleman. A writer in one of our exchanges says the way to get early tomatoes is. as soon as your tomato plants have THE Subscriber has purchased the Livery

common box frame, where the soil is trains. rich and loamy. The box will keep off the wind, and plants sown and grown there eighteen inches apart will produce fruit two weeks sooner spread over the frame at night will

THE COMB IS THE HEN'S PULSE .a good color and full of blood, shak with very quick movements of At twelve o'clock, noon, the Land and Premises mentioned and described in the said Indenture of Mortgage, as follows, viz:—All laying condition. When the rim of the comb and wattles have a purplish tingle, the bird is not well.
