**"A Sur-Shot"**

**Bot and Worm REMOVER**

Between 85 and 95 per cent. of the horses in Western Canada are infested with bots or worms or both. The best time to treat horses for these injurious parasites is in the late fall or early winter, when the bot larvae are still small and have not sapped the vitality of the horse as they will do if horses are left untreated until the spring.

"Sur-Shot Bot and Worm Remover" is absolutely safe, is easily administered, causes no purging or other ill effects, and the results from its use are wonderful. Every package is sold on a guarantee. If the animal treated is infested with parasites and we fail to produce results, your money will be refunded.

A Sur-Shot Bot and Worm Remover is put up in two sized packages, the \$5.00 size containing 24 capsules, which will treat 24 colts, twelve young or light horses, or eight heavy horses. The dose is one capsule for colts, two capsules for light horses, and three for heavy horses. The \$3.00 package contains 12 capsules. An instrument for administering the capsules is sent with each package, but capsules may be purchased separately for \$2.25 per dozen. Order by mail. We will mail postpaid upon receipt of price, either size package.

**CHAINS**

"The 'Just as Good' argument and a 'similar name' will not do for the motorist who knows the genuine Dreadnaught Chains.

"You want a Chain that will give a sure traction in mud, ice, snow, or on slippery asphalt; a chain that won't break, or rattle, or wear out your tires; a chain that won't rust, a chain that you can put on quickly. You want Dreadnaught.

"Dreadnaught Chains are easily adjusted with long lever fastener, and fit tires snugly. The Cross Chains are electrically welded and case hardened. Insist upon genuine Dreadnaught Chains."

*How One Register Does the Work with the*

**Pilot Superior Pipeless Furnace**

The Pilot Superior Combination Register is composed of two sections; the central portion provides for a distribution of the warm air generated by the furnace, and the outer section admits the return air to the furnace. By withdrawing the cool air from the building through this outer section, the resistance to the warm air is overcome. This provides space for the rapidly expanding warm air, which circulates in large volume to all portions of the building. A vacuum cannot be created, therefore the warm air fills all the corners from which the cold air is being withdrawn. We supply full directions on how to set up. Any handy man can install in a few hours.
