# Send Now For Free Book Sample

Learn about the strong. est, most practical, most durable and easiest-laid culvert ever made-that's

"For more than five years I have been experimenting with our experts to find the BEST culvert for all-

round uses. We sought the markets of the world for one that was just right; and we didn't find it. If we had, we'd have bought the

patent rights for Canada. Finally, last spring we struck the idea. Then we put in some expensive months in making that idea better, --and NOW we've got a culvert that is so far ahead of any other there's no comparison."

"You'll read something about it here; but to KNOW how way-shead it really is, you'll want to see the sample (sent free) and read the booklet (free, ditto). With that before you, you will soon see why every Reeve, or Warden, or Town Councillor, or anybody who has any use for culverts at all, will and it pays to get in touch with me right NOW. I am asking you to lay aside your notions of what makes a good culvert, and a cheap culvert, and find out about this NEW culvert. Ladon expect you to buy a foot of it until it PROVES to you that Pedlar Culverts are in a class by themselves, and that you can't afford to overlook them, Let us start that proof toward you soon-address nearest Pedlar place."

Frost-Proof, Rust-Proof, and Wear-Proof

This triple-rib flange-lock principle, found only in Pedlar Culverts, not

only adds greatly to the strength of the piping and makes a perfect

joint-practically as good as if welded-but it also allows for expansion

and contraction under cold or heat. Though a Pedlar Culvert, of any

length, be frozen solid full of ice, it will not split nor spring a leak.

A structure like this, with Pediar Culvert, won't wash out nor need repairs.

A few hours' work and a few dollars will put a modern and permanent culvert in place of a ramshackle bridge. Easily laid by anybody.

Made of Special Billet from Extra Fleavy In every size of Pedlar Culvert, which comes in all standard diameters from 8 inches to 6 feet, we use nothing but the best grade of Billet Iron, specially made for us, of extra-heavy gauge (14 to 20 gauge, according to the diameter). This Billet Iron is curved into semi-cylinders-curved COLD, so there will never be any variation from exact dimensions; and it is then deeply and smoothly corrugated on a special press that puts a pressure of SIXTY TONS on every square inch of the metal. The corrugations, therefore, are uniform and very deep.

### Galvanized After Being Pressed Up

When the corrugating process is done, the sections are galvanized by our exclusive process that covers the entire surface with a thick coating of zinc spelter. Every edge, every crevice, is heavily coated with this rustproof, corrosion-proof galvanizing, not a spot is left unprotected. This is the only culvert galvanized after being shaped. Is absolutely Rust-proof.

### Will Stand Incredible Strains

The heavy-gauge Pedlar Billet Iron sections, deeply corrugated and locked together without bolts or rivers by our compression tripls-rib (this rib is flat not corrugated), make a culvert that will stand enormous crushing strains and neither give nor spring. A thin cushion of soil on top is all the protection such a culvert needs against traffic; and no special precautions need be observed in laying it,-it will stand what

### Compact—Portable Easily Laid

casy in roughest country. Quickly and easily transported anywhere.

Half-sections nested for shipment

Note that the ribs are flat, and the curved part of the cylinder deeply corrugated. These ribs add vastly to the culverts' strength.
