MONEY FORGED BY A BLACKSMITH

Tacoma's Early Currency Wasn't Pretty, but It Went All the Same.

Tacoma once had a mint that coined all the money in circulation where the City of Destiny now stands, and it did not require the flat of Uncle Sam, the silver of Idaho, or the gold of California to make the pieces from Tacoma's mint pass current among the Indians and the few hardy pioneers that were blazing the path of civilization through the forest on the shores of Commencement Bay.
Back in the early seventies the Tacoma Mill Company, not being able to handily secure gold and silver for use in trading with and paying off the Indian laborers and early settlers, hit upon the novel plan of issuing their own currency, and to this end set their blacksmith at work to fashion for them, out of scraps of iron and brass, pieces of money, or rather tokens, which could be used as a circulating medium. The pieces consisted of 40 and 45 cent iron tokens and brass \$1 pieces. The 40-cent pieces were about an inch in diameter, and the 45-cent pieces were about the size of the present silver half dollar. The \$1 pieces were oval in shape, about an inch and a quarter long, an inch wide, and a sixteenth of an inch in thickness. These pieces were stamped with the figures showing their value, and readily passed current all over the country tributary to the mill. Nearly all of this old "mill" soil, for which to coin has passed away, but a few days country is noted. ago William Hanson of the Tacoma Mill Company presented a set of these queer coins to the Ferry Museum. In his letter he said: "The honesty of the people and the absence of any blacksmith shop save

Mars magnetograph, with poles and est and adventure, and Nansen himcott O'Connor. wires around a large circle, but had self, delightful as he is in his own stories, is not a bit more delightful "Through this receiver we could hear than the Hon. Robert Curzon, "after-Perhaps Mr. Curzon's stories must

with all faults, or it may be that he has preserved in his pages quaint habits which even the conservative East has now lost. This is an instance:

The Pascha wanted his pocket hand-kerchief, and looked about and felt n his pocket, for it, but could not find it, making various exclamations during his search, which at last were answered from the lower end of the room. "Feel in your pocket," said the servant. "Well, it is not there," said "'Do you mean to say,' I asked, servant.

"I have not got a handkerchief . . Pascha sat as quietly and passively as possible. The servant, then thrusting his arm up to his elbow in one of the pockets of his Highness' voluminous trousers, pulled out a snuff-box, a rosary, and several other things, which he laid upon the divan. That would not do either; so he came over to the other pocket, and diving to a prodigi-ous depth, he produced the missing handkerchief from the recesses there-of; and with great respect and gravity, thrusting it into the hand, he retired again to his place at the lower end of the hall.—The New Age.

Electric Progress.

Where the Trolley Cars Are Extensively Used for Mails.

Destruction of Water and Gas Pipes by Electricty-Telephonic Service on Ranches.

Two new telephone cables, each with two circuits, are to be laid across the English Channel at once. This will make practically six lines for the London-Paris service.

A new electrolytic soda company has been formed in Germany, with a capital of \$750,000, to carry on the manufacture of Rheinfelden. Another, with a capital of \$600,000, has been formed in France and will erect works near Lyons. A third company for a like purpose has been formed in Russia, with its headquarters at Warsaw and works at Zombkowic.

The subject of the destruction of water and gas pipes by electrolysis is just beginning to receive attention in Denver, Col. Although the extensive systems of electric railways have been in existence some seven years or more the effect of the stray currents has been noted only in the last year or so probably delayed in the dryness of the soil, for which that section of the

In Philadelphia there is a refining and rectifying company, which purifies common river water electrically. Ozone is produced by the electric current, which, when diffused in the water, it is claimed, chemically changes and purifies it. The company originally started out rectifying syrups and alcoholic products, in the course of which it was found that even impure water could be made potable, hence the new industry.

By making use of the alternating current and special designs of receiver and transmitter, two well-known specialists. Lieut. G. O. Squier and ing messages over a wire at a rate of 1,200 words a minute, and confidently claim that from 3,000 to 6,000 words a minute may be dispatched same system between points which are 1.000 miles apart.

In commenting on the action of the United States Supreme Court in sustaining the Berliner patent of 1891, the Electrical Engineer says: ourse, well understood that this decision does not sustain the its intrinsic merits, so that the fight for infringement is still ahead, and may be a long one, even resulting in the cancellation of the patent as voice Meantime, the position of the Bell Telephone Company is measurably fully as good to them as if they had

On a ranch in California, it is stated, telephone communication is established between the various camps, and also with the public system, by lators are not required. The lines are raised over the gateways. It is said that the wire fences will not carry as many connections as a single wire sulated, but that in a general way this novel telephone is a success. is said that similar systems are in existence in Texas. The postmaster of Philadelphia, says

the Electrical Engineer, "is enthusiastic in his praise of the trolley car mail system, as carried out on the 600 miles of trolley lines in that city. There are now 30 clerks at work on that service, and he states that the envelopes show by their record a great improve ment over the old system of mai transfer by horse and pneumatic tube system has been much taked about, but he sees no use for it, unless it can handle mail sacks weighing 250 pounds apiece. It seems
