

of this service is to maintain an up-to-date list of implement dealers for those who desire it. This list will be supplied at a very nominal cost.

**Map Showing Tractor Areas in Manitoba, Saskatchewan and Alberta**

Shaded portions show tractor area that has been developed.

Dark portions show where greatest development has taken place.

The above map shows the tractor area in Western Canada. It will be observed that the three provinces of Manitoba, Saskatchewan and Alberta are pretty well covered. There is no place in the world where tractors are so generally used as in this field. In fact the gas tractor really had its beginning in the Canadian West.

The Winnipeg Motor Contests of 1908-09-10-11-12-13 marked the beginning of tractor history, and the data secured at these contests can be found in the files of practically every tractor designer to-day.

The Western Canadian farmer pioneered the tractor. From a few makeshifts in 1903 to the modern gas tractor of 1918, of which there are over 16,000 in use in the three prairie provinces, is a long cry. It is the story of an implement that made its way through great difficulties both on the part of the farmer and the manufacturer.

Power farming is here to stay and while no doubt the future will see many changes and improvements in tractors, the adaptability of the tractor to soil cultivation has been proven beyond a doubt in the Canadian West.

**The Canadian Thresherman and Farmer** has always championed the tractor. It has done everything in its power to boost the tractor, and during the past 14 years has published and distributed volumes of helpful literature on this class of farm machine.
