

attained in relation to parts that were readily observed during the progress of the case that cavil is now beyond reach. The only question here is one of subsequent recurrence, and that question the gratified patients who have been cured are quite willing to leave the future to deal with, their present condition being such a pleasing contrast to that which afflicted them for many years past. The worst case of this disease which had been treated by Koch's remedy either in London or Berlin is the only one that I will specially refer to, and is as follows:—

Charité Hospital, Berlin.—Jäger, aged 28, a man of good physique and good family history, suffered from lupus for many years. On entering hospital the diseased tissue extended over both cheeks as high as malar bones and outwards some two inches beyond angles of each jaw, downwards over lips, chin and neck to pomum Adami, nose eaten away to bony septum, and lupoid tissue extending upward over remaining nasal structure to lower border of frontal bone,—in fact, the face presented a suppurating, ulcerating, putrid mass, emitting such a horrible odor as to made his presence in the ward unsupportable had it not been for the aid of antiseptics and deodorants. Treatment by Koch's lymph alone was begun on 9th December last by injection of one centigram. Reaction followed in five hours, with temperature of 103° , pulse 112. Three days after, on repeating the same dose, about similar results followed, and this happened until the fifth dose was given, when, instead of fever following, a subnormal temperature was caused. By increasing the dose one-half a normal temperature was reached; again, on giving double original dose, viz., 0.02, temperature became subnormal. This was on 23rd December, and the Christmas holidays interfering, the patient received no further treatment until the 29th December, when 0.03 c.c. were given without reaction. At this time, in spite of the intermission of about a week in treatment, the appearance of this patient was so remarkable in contrast to his condition on entering that one could not be otherwise than delighted at the wonderfully good effect produced. The last time I saw and talked with this man only a number of isolated nodules of ulceration remained, and I know from experience in
