

The first year of the project was spent in the field collecting data on the distribution and abundance of the species. The second year was spent in the laboratory analyzing the data and preparing the report. The third year was spent in the field collecting data on the distribution and abundance of the species. The fourth year was spent in the laboratory analyzing the data and preparing the report. The fifth year was spent in the field collecting data on the distribution and abundance of the species. The sixth year was spent in the laboratory analyzing the data and preparing the report. The seventh year was spent in the field collecting data on the distribution and abundance of the species. The eighth year was spent in the laboratory analyzing the data and preparing the report. The ninth year was spent in the field collecting data on the distribution and abundance of the species. The tenth year was spent in the laboratory analyzing the data and preparing the report.

The project was supported by the National Science Foundation and the University of California. The project was supervised by Dr. John Doe and Dr. Jane Smith. The project was completed in 1990. The project was published in the Journal of Ecology. The project was cited in the book "Ecology of the Pacific Northwest". The project was cited in the book "Ecology of the Pacific Northwest". The project was cited in the book "Ecology of the Pacific Northwest". The project was cited in the book "Ecology of the Pacific Northwest". The project was cited in the book "Ecology of the Pacific Northwest". The project was cited in the book "Ecology of the Pacific Northwest". The project was cited in the book "Ecology of the Pacific Northwest". The project was cited in the book "Ecology of the Pacific Northwest". The project was cited in the book "Ecology of the Pacific Northwest". The project was cited in the book "Ecology of the Pacific Northwest".
