GOSSIP

LARGER DAIRY PROFITS

A large catalogue full of suggestions for dairy farmers, large and small, has come to hand from W. A. Drummond & Co. of 177 King street, Toronto. The firm in question is one of the largest manufacturers of dairy supplies in Canada.

A few of their popular lines, include Milk Bottles, Pure Food Cans, Babcock Milk Tester, Automatic Scales, Rubber Milk Bottles, and that wonderful machine, The Root Extractor. These are only a few of hundreds of useful articles which are only mentioned in the catalogue. The money for any firm's goods will make them more than make up the cost of order; they will send a catalogue to any Farm and Dairy dealer free of charge, mentioning at the same time any particular thing they are in need of.

LARGEST PROFITS WHEN UNDER OFFICIAL TEST

A breeder asks why I do not sometimes give cost of production, and the value of product, for each dollar's worth of food consumed; saying that he sees that the Association sometimes uses this method in its advertising. I do not mention cost of production because, except in tests conducted at world's fairs, where all feed is kept unadulterated, it is practically impossible to determine the cost of production of the general consumer, so far as to receive credit therefor by the breeders, and it is not fair to the farmer to do so. I can assure that no part of an official test; but by my own experience, I know that the period of largest net profit for Holstein-Friesian is during the period during which they are under official test.

As to the calculations of food consumed, and from each dollar's worth of food consumed, this is the method of calculating per cent. profit—

As to the calculations of food consumed, and from each dollar's worth of food consumed, this is the method of calculating per cent. profit—
This profit, however, that looks plausible, but is misleading. Intrinsic to the interests of dairy breeders, if we are to follow that method of reasoning to its logical conclusion, the smaller the dairy animal, the more profitable; and saying nothing of the cheapness of their traditional diet of tin cans and rubber boots, but merely on account of size the goat would have to be selected as the most desirable dairy animal. Per cent. profit takes into the account the most desirable dairy animal; and it ignores the factor that of cost of food. Holstein-Friesian breeders care nothing for their feed cost, nothing for their milk, but they feed last the longest possible time; but they look sharply to getting the largest possible net profit. They do not want to know how little value in feed a cow will consume in a given time, but how much net profit over and over the value of the food consumed she will return during that time. Measured by the false method of per cent. profit, especially when the butter fat produced is alone considered, the Holstein-Friesian is alone to be advantage. It is not the net profit that she will always be found at net profit when it comes to the practical work of lifting the money, per cent. profit must be thrown overboard, and the net profit must be placed upon the net profit gained by M. H. Gardner, Supt., Advanced Registry, Delavan, Wis.

"A GOOD RECORD BOOK."—I received the farmers' record book a few days ago and was sent me by Farm and Dairy in return for a note of subscription. I am much pleased with it. A farmer can keep a record of everything on his farm through the use of one of these record books.—W. P. McARDLE, Quebec.

CRUMB'S IMPROVED WARRIOR STANCHION
