

## Easy to Lay

# Amatite ROOFING

THE first ready roofings made some thirty years ago, lasted a very short time.

Then manufacturers improved the goods and smooth-surfaced roofings of various kinds were developed, that would endure fairly well if the top surface was given a coat of heavy waterproof paint every two years.

Now comes Amatite—with a mineral surface which requires no painting and which will last longer without painting than the other kind did with constant painting.

The top surface being mineral, is unaffected by weather or climate. It really protects.

The waterproofing material in Amatite is pitch—the best resistant to water known. Water will in time dissolve or disintegrate almost anything, but it is powerless against pitch.

Roofings of twice the price often do not protect as well because they are not waterproofed with pitch.

Amatite is easy to lay—anyone can do the work. We furnish you free, nails and liquid cement for laps.

Investigate the cost of Amatite in your locality. You will be astonished at its low price.

Samples and illustrated Booklet FREE on request to nearest office.

## Visit us when you Visit the Fair

We extend a cordial invitation to our readers to call on us during Fair Time. We shall be pleased to show you through our building and have you inspect our plant. You have been a reader of the Advocate for years. You know us. We want to know you better.

## FARMER'S ADVOCATE OF WINNIPEG, Ltd.

14-16 PRINCESS STREET

### HOW TO BUILD A GOOD FENCE

Everyone intending fence building should send for our folder on Erecting Fences. It's full of valuable information on fence building, tells how to erect woven wire fencing quickly and substantially, shows the importance of fence post making, showing how these durable posts can be made at home. Don't fail to write for a copy. It's free.

THE BANWELL HOSIE WIRE FENCE CO., Ltd.  
Dept. M Hamilton, Ontario.

### GUARANTEED STALLION

Someone wrote us asking what he could do to recover damages as the horse he bought has not proved sure. No name nor address accompanied the enquiry, so it is not answered, but this notice is given to impress upon our readers that we must have their names and post offices when they ask questions.

We treat enquiries in confidence by simply publishing initials, but we want to know who we are working for. Signatures such as "Reader," "Old Subscriber," "Perplexed," etc., are not sufficient.

### ACTINOMYCOSIS.

1. Ox has a swelling on windpipe at back of jaw; seems hard and is noticeable from outside. Has trouble breathing when working. Also has cough; runs a little at nose; goes very thin but is doing better on new grass. Has been this way for about five months.

2. Cow has lump on side of jaw seemingly just in the flesh. It got soft in the center and was lanced. It is hard now and not quite healed. Has been on for about ten months. Is her milk fit to use?

A. W. A.

Ans.—Cattle are prone to tumors of different kinds, which affects various regions of the body. The tumors may be of either malignant or benign origin. If of the former type they are due to a specific organism (germ) such as the germ of tuberculosis or the fungus of Actinomyces. These are invariably pernicious and from the beginning tend to destroy life. If of the latter type, they do not of themselves tend to produce death and are generally amenable to surgical treatment. It is impossible to correctly diagnose the disease from which the ox is suffering without an examination but the cow is affected with Actinomyces (Lumpy Jaw), which is also, possibly, the trouble in the ox.

Give each animal from 1 1/2 to 2 drams of Iodide of Potash dissolved in a pint of cold water, as a drench once a day before feeding. The size of the dose must be regulated according to the size of the patient. Continue this medicine until signs of iodism appear, usually in ten days the signs are. The skin becomes scurfy, weeping from the eyes, catarrh from the nose, and loss of appetite. When these symptoms appear the medicine should be discontinued for a few days and afterwards resumed at the same dose. Paint the tumors once a day with tincture of iodine, but do not blister the parts.

The milk is not fit for use while the medicine is being used.

### CHICK WEED

Could you give the name of the enclosed weed which I found in some Western rye grass pasture? How can it be eradicated? It is off new ground and all seeds would be near the surface. Man.

Ans.—This is mouse-ear chickweed, not at all dangerous, and comparatively easy to eradicate. The seed is found frequently in grass seed, and has very evidently been brought onto your farm in that way. It is of no serious import and being an annual weed is easily eradicated by any method of summer cultivation or cutting that will keep seed from being formed.

What if a Goodby piano does cost a few dollars more? You get your money's worth. You obtain the extra value in the added durability and your assurance of permanent value. For piano well as other instruments in home they are very satisfactory because in the long run they are the best.

## It is more generous

to tell the secret of bagging game than it is to give away the game. Don't keep Dominion ammunition a secret for yourself.

You bag your game with Dominion cartridges, because they contain the finest materials, and are the most carefully made and tested cartridges in the world.

For all makes of arms. Costs one-third to one-fifth less than duty paying ammunition. Our guarantee puts all risk on the Dominion Cartridge Co., Ltd., Montreal.

### DOMINION AMMUNITION
