**BEDDING FOR STABLES**

Straw, Peat Moss, Sawdust and  
Shavings Considered.

Straw Preferred for Many Reasons  
—Measuring Hay in the Mow and  
In the Stack—Hand-feeding  
Lambs—Farm Trespassers Scored.

(Contributed by Ontario Department of  
Agriculture, Toronto.)

The materials used for bedding  
domestic animals are generally straw  
from the grain fields, peat moss from  
the swamp, or shavings from the saw  
or planing mill. Straw is used to a  
greater extent than any other mat-  
erial, first because of its abundance;  
secondly because the stable offers a  
medium for transferring this by-  
product of the field to manure, and  
thereby facilitating its return to the  
land; thirdly because it is a good  
absorbent of liquids. Straws from  
oats, peas, rye, wheat and oats vary  
in value as a litter or bedding mat-  
erial. The hard rye and wheat  
straws, while durable to the wear of  
animals, is not as good an absorbent  
as the softer oat, barley and pea  
straws. Wheat straw not being highly  
valued as a feed finds its greatest  
use as a stable bedding. The nitro-  
gen, potash and phosphorus contain-  
ed in a ton of wheat or rye straw  
has a value at commercial fertilizer  
prices of \$2.25, oat straw \$2.60, and  
barley straw \$2.10. Straws have a  
further value in that the organic  
matter content is large, and of such  
a nature as to be particularly valu-  
able in soil improvement. Peat moss  
is valuable as an absorbent of liquids,  
it is also valuable for its nitrogen  
content. The manure from stables  
where peat moss is used as bedding  
is generally of considerably higher  
value than the manure from any other  
source. It has one objection in  
that it is not as clean as straw. Saw-  
dust and shavings, while serving the  
purpose as a litter or bedding mat-  
erial, add little value to the manure.  
Useful as an aid in keeping the ani-  
mals clean and preventing the loss  
of the liquid portion of the manure,  
sawdust or shavings serve a good  
purpose; but it must be remembered  
that the fertility value of sawdust is  
low. Those who have straw should  
use it. Those who have neither straw  
or peat moss should then use the  
sawdust or shavings.—L. Stevenson,  
Sec., Dept. of Agriculture, Toronto.
