The man obeyed, and Griffin ran his left hand into his right side overcoat pecket and pulled a long, glistening revolver, the one with which Harris held a room full of Yankee officers at bay until he made his escape.

Patent Fenders for Trolleys.

New York, Feb. 19.—S. A. Darrach, a New York inventor, has been turning his attention to the subject of fenders for cable and trolley cars and working in a different line from other experiments. He has constructed a 35-pound fender which will pick up and carry a 200-pound man. It is a duplex fender, the front part of which consists of a couch of steel springs to catch a person who is struck and knocked down. This extends ahead of the car and rides nearly six inches from the ground. Should anybody pass under it, the wheels glide over the obstruction and automatically drop a light secop behind them under the platform, which picks up the victim and protects him from the car wheels. Mr. Darrach's faith in the device is so great that he stood in front of a car to which it had been attached and was repeatedly picked up by it. One of his workmen submitted to the same test and was unburt.
