

BEFORE MY BABY CAME

I Was Gladly Benefited by Taking Lydia E. Pinkham's Vegetable Compound

Sydenham, Ont.—"I took your medicine before my baby was born, and it was a great help to me as I was very poorly until I had started to take it. I just felt as though I was tired out all the time and would have weak, faint spells. My nerves would bother me until I could get little rest, night or day. I was told by a friend to take Lydia E. Pinkham's Vegetable Compound, and I only took a few bottles and it helped me wonderfully. I would recommend it to any woman. I am doing what I can to recommend this good medicine. I will lend that little book you sent me to any one I can help. You can with the greatest of pleasure use my name in regard to the Vegetable Compound if it will help others take it."—Mrs. HARVEY MILLIGAN, Sydenham, Ont.

It is remarkable how many cases have been reported similar to this one. Many women are poorly at such times and get into a weakened, run-down condition, when it is essential to the mother as well as the child, that her strength be kept up.

Lydia E. Pinkham's Vegetable Compound is an excellent tonic for the mother at this time. It is prepared from medicinal roots and herbs, and does not contain any harmful drugs. It may be taken in safety by the nursing mother.

PREMIER PROCLAIMS HYDRO DEVELOPMENT TO BE THE SALVATION OF NEW BRUNSWICK

Government to Proceed with Development of Grand Falls as Public Ownership Proposition—Initial Development to be From 60,000 to 80,000 Horse Power—Cost and Other Matters of Interest Untouched in Statement Read in Legislature.

Fredericton, March 12.—Hydro development was proclaimed by Premier Veniot in his announcement of Government policy in the Legislature yesterday afternoon to be "the salvation of New Brunswick."

The Premier made his statement during a speech in the debate on the Budget in which he definitely announced that the Government had decided to enter upon development of the Grand Falls on the St. John river, said to be the most potential water power east of Niagara Falls.

He positively announced that the project would be carried out as a public ownership proposition, which was in accordance with the Government's original hydro policy under which the Musquash development, near St. John, had been carried out. The Grand Falls project, the Premier definitely asserted, would be self-sustaining and, he added, "inasmuch as there is a market available for the power to be developed, the cry of economy should not apply."

The Premier outlined a plan for an initial development of from 60,000 to 80,000 horse power, division of the province into two districts for distribution covering virtually the entire province with a network of hydro transmission lines which could connect the Grand Falls development with other developments in New Brunswick at the present time and the ultimate development of from 120,000 to 140,000 horse power as the demand grows. He failed to give any estimate of costs or to make any specific statement in relation to whether the New Brunswick Electric Power Commission would have charge of the Grand Falls project or whether the proposal to make hydro development an adjunct of the Public Works Department has been tossed into the discard or not.

"Stakes All" on Musquash.

The Premier's statement regarding the Grand Falls project, was preceded by one in relation to the development at Musquash in which he declared he was ready to "stake all" that the Musquash development will measure up to more than was expected and promised. He gave the cost of the Musquash development "into the city of St. John" as \$2,312,273 with another \$740,000 spent on transmission lines and distribution; he said it would save the users of electricity in St. John \$250,000 a year and was therefore certain to be worth what it cost, inasmuch as it had forced the New Brunswick Power Company to reduce their rates from 18 1/2 cents. He challenged the Opposition to make formal charges crystallizing the insidious rumors going the rounds to the effect that contracts had been purloined for graft and campaign fund purposes and said he would ask for a court of inquiry with a judge to carry on the investigation. He was never anticipated, he said, that one dollar would come out of the pockets of the people to pay for the Musquash development and, he added, he had given the figures to show there will be no net cost.

The Premier's complete statement regarding Grand Falls development, which he read, follows:

"I come now to the extension of hydro policy of 1920, the much talked of Grand Falls Water Power. I know the people of this province have been waiting impatiently for the decision of the Government regarding this project. May I be permitted to assure the public that we have been making haste too slowly. May I be permitted to assure the public that every care has been exercised in obtaining the necessary data on which to base a decision. It is true that we have expended a great deal of time and some money in research work, engineering and other works in order

to say to the people that Grand Falls was or was not feasible from a commercial standpoint. I am convinced that the public will appreciate the care with which we approached an undertaking of such magnitude. The most careful investigation of the possibilities of Grand Falls has been made, and I am grateful to be able to say to you that the Government is so far favorable have been the reports submitted to the government by our engineers, checked up and verified by hydro development experts of eminent standing, whose report is not on the table of the House, that the government has taken the decision to enter as soon as circumstances will permit upon the development of water powers at Grand Falls.

"It must not be forgotten that this question is an international one and that before undertaking the work we must have the co-operation of the Federal Government of the United States and Canada, together with the consent of the International Waterways Commission, as well as arrangements with the Government of Quebec respecting certain water storage privileges within that province. We cannot develop an ounce of power without the completion of such arrangements even if our storage privileges were all confined to Canadian territory, owing to the terms of the Ashburton Treaty. We do not anticipate any great difficulties in this respect, but it all takes time to bring proper measures and understandings to that end.

Programme for Development

"The programme of this development as outlined it is as follows, subject to changes necessitated by the increasing volume of business which is sure to follow in the wake of this project.

"The initial work at the Falls proper will be designed to take over the development to the amount of 120,000 to 140,000 horse power. This will include all available horse power from storage in the Grand Falls Canadian territory, but it is only intended to develop at present the power which would come from storage possibilities on purely Canadian territory which would run from 60,000 to 80,000 horse power. The province will be divided into sections called the north and south sections. The northern section would be from Grand Falls to St. Leonard, with a branch to Edmundston and further that south as a business waterway. From St. Leonard the main line run to Campbellton following the general direction of the railway, thence Campbellton to Bathurst linking up with the thirty-six miles already owned by the province on to Newcastle, Chatham, and it is hoped to link up with the Kouchibougué development so that Richibucto, Exton and Buctouche would be eventually reached.

"The southern section of the province would run from Grand Falls down the St. John river to Woodstock, Fredericton, branching off to McAdam Junction, up the Nashwaak and Miramichi Valleys; also a line from Fredericton to Minto and Chipman and if feasible to Sussex. From Fredericton the line would continue towards St. John to link up with the Musquash development and continue on to St. Stephen as the development of industry warranted. When linked up with the Musquash system extensions could be made from Moncton to the Nova Scotia border, taking in such prosperous places as Fox Creek, Dover, Memramcook, Dorchester, Sackville, and branching off to Bate Verde, Fort Elgin, including branch lines into Albert County.

"It is not anticipated that 60,000 horse power will furnish light and power to all these sections, but as the demands increase additional storage and units will be added, eventually bringing the development to its full capacity, which is estimated as sufficient to meet all the requirements. The full capacity is about 140,000 horse power.

"Should the development of the Petitcodiac river be found to be feasible, the counties of Albert, Westmorland and Kent would be supplied from that source. While on this point, may I say that the Government is so strongly convinced of the absolute necessity of all possible hydro development that it has been decided to co-operate to the fullest extent with the Dominion Waterways Branch in the investigation of the Petitcodiac river scheme.

"To Bring Trade and Industry.

"I know that there will be opposition to the bonding of this project for such large amounts of money necessary to carry this project to completion. The opponents of public ownership will raise their hands in protest, but I am confident that the people of this province will support the necessity of economy in these times of commercial and industrial stress. But it is not economy which withholds the expenditure of public money when you are convinced that you can create a greater expansion of trade and industry and bring that prosperity to our province, which is so much needed to-day. Hydro development is the salvation of the province of New Brunswick. This work can be carried on and made a success without costing the exchequer

NET EARNINGS SHOW BIG INCREASE

Complete Financial Statement of System is Announced.

Montreal, March 15.—Final figures showing the complete statement of operating results during 1923 announced Friday by the Canadian National Railways show that the net earnings of the system during last year were \$20,286,568.09 as compared with \$2,886,711.55 in 1922 or a net increase of \$17,399,856.54. They differ only slightly from the estimated earnings for 1923 as announced by Sir Henry W. Thornton, president and chairman of the board of directors early in January of this year.

The final figures for the year are: Operating revenues, 1923—\$254,922,456.04; 1922—\$229,025,06; Increase \$25,931,390.99. Operating expenses 1923—\$24,689,892.95; 1922—\$23,172,513.50; Increase, \$3,517,379.45.

Net revenues, 1923—\$20,286,568.09; 1922—\$2,886,711.55; increase \$17,399,856.54.

Final figures for December, 1923, show the net earnings for that month to be \$3,633,960.12 as compared with a deficit of \$2,885,404.52 in the corresponding month of 1922, an improvement of \$6,519,364.64.

The complete statement for the month as compared with the corresponding month of 1922 is as follows: Gross earnings \$22,767,007.17 \$1,694,280.81 Operating expenses \$19,133,047.05 \$4,925,038.38 Net earnings \$3,633,960.12 \$6,519,364.64

During the month of December 1923, the operating ratio was 84.04 per cent as compared with 86.77 per cent of 1922. During the twelve months ending December 31st, 1923, the operating ratio was 92.06 per cent as compared with 95.77 per cent during the corresponding period of 1922, a decrease of 6.71 per cent.

er of this province one dollar. This will be self-sustaining and at the maturity of the debt incurred the province will own a grand and valuable asset. It is not the function of a Government to build alone for the present, our policies should be directed to the future as well as the present needs.

"There is no need of being fearful of a market for this development up to at least 150,000 horse power. That being the case, the cry of economy should not apply to an undertaking which has an assured means of meeting its obligations without imposing one dollar of burden upon the people.

"It will not be a difficult matter to have a transmission line reach St. Stephen direct from Grand Falls, and hence on to link up with Musquash should increased industry demand such an extension.

"All the small water powers in the province, such as Shogomog, Pokok, Medrick, Lepreau, Magaguavic, Tetsagouche, Upenagitch, Grey Rapids, Shediac and others, not yet examined, of very little value as separate units, could be linked up with the great development and utilized to supplement the general system.

To Give People Final Word

"In announcing the policy of the Government you will note that I have referred to certain unavoidable delays that must exist in connection with international questions. I may add that there are also certain other matters of importance to be settled, such as the claims of the Grand Falls Water Power Company and land damages. There are also the additional surveys necessary for the completion of plans of the construction, as well as surveys for transmission lines. The Government is also in touch with persons who desire to invest capital in the establishment of new industries to be operated by hydro power. All this will take considerable time. It is the desire of the Government before

fore causing the expenditure of one dollar for the construction of the initial works at Grand Falls and the storage dams, as well as the transmission lines, to have everything so lined up that we can give to the people an opportunity of approving of a project which must necessarily involve such a large expenditure of money. While we have every faith in the project and are prepared to back it, yet we feel the people should have a final voice in the matter before we undertake the real work of development. It may take a year to line up everything preparatory to turning the first sod, and our desire to consult the people will not, I feel, in any way delay the work of development.

Hasn't Broken Yet — and Never Will

Most wire fences are "good" wire fences until they are put to the test — and then you learn the difference.

Maritime Wire Fences never disappoint. They are made and sold on honor — our reputation is back of every inch. The quality is of the very highest — yet the price is no more than you would have to pay for the ordinary, make-shift kind.

Made of extra heavy, hard drawn, coil spring Steel wire.

We have a splendid proposition for agents. Write for our Illustrated Fence Book and Price List at once.
