

## CRANES

The two cranes shown on page 103 are taken from the special Mechanical Department catalogue and illustrate the plate web and open lattice types of crane girders.

The upper cut presents a 20 ton 4 motor electric travelling crane of 70 feet span equipped with a 5 ton auxiliary hoist. Two of these were furnished to the Canadian Steel Foundries, Limited.

The lower view shows a 20 ton 5 motor travelling crane of 88 feet span carrying two 10 ton trolleys. Five of these are used in the Dominion Bridge Company's own yards.

For a complete survey of the question of cranes—hand power and electric—of any span and any capacity the special catalogue of the Mechanical Department should be consulted.
