

## It is Dangerous to Use Counterfeit Parts for the

# Ford

**B**Y allowing your garage man to use imitation parts in repairing your car you not only invite repeated repair bills and more serious breakdowns, but you actually endanger your own life and the lives of others. Cheap and inferior parts used in connection with the steering control are liable to cause accidents of a very serious nature.

### You Risk Your Life When You Use Imitation Spindles

In a recent test the tensile strength of the genuine Ford Vanadium Steel spindle arm was found to be over 100% more than that of the counterfeit machine steel part. The arms were submitted to shock, and the counterfeit arm broke at a pulling force equivalent to 11,425 pounds applied to a cross section. The same pulling force applied to a corresponding cross section of a genuine Ford spindle arm did not even change its original size or shape. In order to separate the genuine spindle arm it was necessary to apply a pulling force of 25,000 pounds.

The spindle arm is one of the vital parts entering into the control of a car, and by using spurious parts in such places, Ford owners are risking lives and property.

You are merely protecting yourself and avoiding repeated repair bills when you demand genuine Ford parts.
