### QUEBEC BRIDGE AGAIN.

A new Quebec Bridge question has come up. Sir Wilfrid Laurier and Mr. Parent have been consulting at Quebec and it seems certain that Parliament will be asked to guarantee more money for this structure.

Mr. Parent, who is now chairman of the Transcontinental Construction Commission, was the head of the Bridge Company. At first he got a subsidy voted and submitted estimates of cost. Later the Government guaranteed bonds to the extent of \$7,000,000 which was much more than the original estimate of the cost of the bridge. Now it appears that more money is wanted, and the Government must find it. Mr. Parent's company, which has privilege of building the bridge and which will hand it over on profitable terms for the use of the Transcontinental, does not appear to be putting much money into the enterprise. It is all paid for with the Canadian guaranteed bonds and subsidies while all the profits go to the nominat stockholders.

### SALARIES MUST GO UP.

In commenting upon a subject which has been the topic of several discussions in this journal recently, the Galt Reformer has the following to say:

"The call of the West has been answered by several of Galt's school teachers, and recently two of the very best have gone to Alberta after having taught here for many years.

"The reason for their leaving was wholly a question of remuneration. Like the rest of the school boards of Ontario, the paying of better salaries to teachers must be considered.

"The West schools offer flattering inducements and there are many teachers who are content to forsake the conveniences of the East for less attractive but more remunerative positions in the West.

"Teachers' salaries in Ontario are notoriously low and it is for this reason that the profession has not attracted such large numbers to its ranks as it did ten or fifteen years ago.

"The salaries must go up. If the public is interested in having the best men and women instructing its children the public must be willing to pay the price which will bring the brighter minds into the profession."

### A COSTLY ELECTION.

It is doubtless annoying to Ministers and their leading supporters that the one Nova Scotia member unseated for corrupt practices is the Minister of Finance. But it is well known that several other members would have gone the same way if they had not managed to escape trial, either by evading service altogether or by tactics which resulted in the dismissal of the petitions on technical grounds.

Mr. Fielding's election was perhaps not more corrupt than that of some of his Nova Scotia associates, the Halifax members for instance. But people may dismiss from their minds any impression that Mr. Fielding either obtained or expected a pure election. The constituency of Shelburne and Queens has received at least its full proportion of the campaign fund and it is well known that the Nova Scotia campaign fund both in 1900 and 1904 was very large.

It appears from Mr. Fielding's own evidence that the appropriation for his constituency in 1900 was found inadequate. The politician, who represents Queen's County in the Nova Scotia Legislature, demanded more money after the election was over to pay the campaign bills. Mr. Fielding says he objected to the payment. He was no doubt surprised to find that more was needed than had been allotted the riding in the first place. But he admits that he paid the money.

High aims form high characters and great objects bring out great minds.

## 2 in 1 SHOE POLISH

Black and White

A child does not need to be shown a good thing twice, and in this respect he is often ahead of his parents.

If you want "2 in 1" don't take anything else.

Black in 10c. and 25c. tins. White in 15c. glass.

No. 4161.

### Shares in Belt Millions.

Mrs. Otto Belt is the wife of the brother who inherits the biggest part of the huge fortune left by the South African diamond king. She was Lillian Carter of New Orleans and is connected with some of the best families of Louisiana. Her mother, Mrs. Thomas

MRS. OTTO BELT.

Lane Carter, and a sister, Mrs. W. E. Hall, live in a pretty country cottage near Hammond, fifty miles from New Orleans. At 15 Lillian Carter was sent to England to attend school and lived there with an aunt. She met Otto Belt at her aunt's home in London. They have four children.

### STICKS IN THE STOMACH

Feeling That Often Comes to People With Weak Digestion.

A poor sufferer from indigestion once said that his stomach felt as though it was filled with sticks and as though some of them were on fire and burning him up inside.

When the stomach and the organs of digestion and nutrition are weakened and do not act properly, the symptoms of ill-health that follow are many and varied. There is often a feeling of heaviness in the stomach, there is distress and nervousness, dizziness, nausea, nervous and sick headaches, inability to sleep well, pains in the side and limbs, specks before the eyes and a general peevish, irritable condition.

All these troubles are the direct result of indigestion. Cure this by strengthening the stomach and digestive system with Mi-on-a stomach tablets and your symptoms of ill-health will vanish like dew before the morning sun. Life will be joyous, and digestion will be so natural that you will forget you have a stomach. Mi-on-a stomach tablets cost but 50c a box and are sold under an absolute guarantee that they will be successful in every case where used according to directions, or money will be refunded.

For sale by all dealers. The R. T. Booth Co., Buffalo, N. Y.

### Symptoms.

A physician was talking about his patient's symptoms.

"Young, strong people don't give me enough symptoms when they are ill," he said, "but the middle aged and the aged give me too many. Thinking about their health all the time, studying their condition all the time, the aged and the middle aged discover a symptom in every muscle, in every organ, in every limb. Thus they confuse me."

"The average sufferer of fifty or so will pour upon my head a deluge of symptoms like this:

"Well, doctor, I'm miserable all over, feverish one minute, freezing the next. I've a gnawing pain in my hip and side and back and an all over sensation in the stomach, with a shooting, neuralgic headache over the left eye. I have a queer taste in my mouth, a disinclination to eat, and a dull ache up and down the right side, along with a kind of numbness. I cough a lot, my throat's sore, and I've the carache. Appetite's fair, but not what it should be. I have a feeling of lassitude, and I'm very weak. These are only a few of my main symptoms. To proceed, etc."—Exchange.

### NEW YORK CENTRAL EXCURSION TO NEW YORK, AUGUST 28TH.

Everyone is going to take advantage of the big excursion to New York on August 28th, via New York Central, "America's Greatest Railroad,"—\$10.25 for round trip from Suspension Bridge or Buffalo, good 15 days for return, and giving privilege of trip on Hudson River steamers without extra charge.

For full and detailed information write or call on Louis Drago, Canadian Passenger Agent, 691-3 Yonge St., Toronto.

## FASHION HINTS

LADIES' SHIRTAWAIST.

No. 4161.

As shown on this page, Persian lawn with German Valenciennes insertion and lace edging were used for the waist. The tucks, which are grouped in clusters of five, are stitched to yoke depth, and insertion is sewed between the clusters. Buttons and buttonholes fascen the waist at the back. A cuff of insertion gives a dainty finish to the full sleeve or a deep cuff finish is provided for full length. Handkerchief linen, batiste, organdie, etc., insertion, motifs, medallions and hand embroidery combine well.

The quantity of material required for size 36 is 3 yards of 36-inch goods, 8 yards of insertion and 3 yards of edging. Pattern No. 4161 is cut in sizes 32 to 42 inches, bust measure.

Mailed postpaid on receipt of 10 cents, name, size and address to the Fashion Department of the C. Austin & Co., Chatham, Ont.

### An Unsettled Spirit.

A contented spirit was Mrs. Snow's, so contented that at times her neighbors found it trying and took an unrighteous satisfaction in presenting any small thorns which might prick through her comfort.

"No, my angle hasn't the measles," said Mrs. Snow one day. "Well, perhaps it seems strange she should escape the epidemic, but my children are unusually fortunate always in those respects. Of course I take the best of care of them, and, then, they inherit a tendency to throw off any germs. I anticipate no illness with angle."

In spite of this the redoubtable angle came down with measles a week later, and the inquiring friend again approached Mrs. Snow.

"Yes, dear angle has the measles at last," said the contented mother. "Now, most of the other children are well, and as the doctor has plenty of time to attend to her it really seemed an opportunity for angle. I don't suppose there ever was a child on whom they came over more beautifully than on angle. I tell the doctor I think he may well be proud of his little patient."—Youth's Companion.

—When a woman suffers from depressing weakness, she then keenly realizes how helpless—how thoroughly worthless she is. Dr. Shoop has brought relief to thousands of such women. He reaches diseases peculiar to women in two direct, specific ways—a local treatment known by druggists everywhere as Dr. Shoop's Night Cure, and a constitutional or internal prescription called Dr. Shoop's Restorative. Dr. Shoop's Night Cure is applied locally, and at night. It works while you sleep. It reduces inflammation, it stops discharges, it heals, it soothes, it comforts, it cures.

Dr. Shoop's Restorative (tablet or liquid form) is a constitutional, nerve tissue, tonic. It brings renewed strength, lasting ambition and vigor to weak, lifeless women.

These two remedies, taken together, have an irresistible, positive helpful power. Try them a month and see.

Sold by Q. H. Gunn & Co.

### The Atmosphere.

Even if it were possible for man to live without breathing air he could not exist on earth if it were without an atmosphere. Plants derive carbon, the most important element of their food, from the air, and without plants there could be no food for animals and therefore no human beings. Water also comes from the atmosphere, but if there were no water there could be neither plants nor animals. If food and water could be supplied in some other way the world would still be uninhabitable by plants and animals owing to the severity of the cold. Without an atmosphere there would be no winds and consequently no waves or ocean currents. The sea—if we may suppose one to have been supplied by some unknown cause—would be a stagnant pool, uninhabitable by seaweed or fish.

### DOCTORS CHANGE THEIR METHODS.

Years ago they fought catarrh by internal dosing. They saw this ruined the stomach and changed to the osmotic air cure, better known as "Catarrhose." This treatment is sure to cure. It goes to the source of the disease; it destroys the causes that maintain catarrh and even in the worst cases permanent cure is guaranteed. Failure with Catarrhose is impossible. Antiseptic, healing and far-reaching, it's bound to cure every time. Endorsed by more than twenty thousand physicians in America alone and sold in 25c. and \$1.00 sizes by all dealers.

To be entirely tolerant we must tolerate those who are intolerant.

Minard's Liniment cures Burns, etc.

## A CHEMICAL JUBILEE.

Coal-Tar Color Discoverer Honored By Notable Experimentalists of England and Continent.

Fifty years ago William Perkin, an English lad not out of his teens, was experimenting with coal tar in order to discover a method by which quinine might be made. As he worked he separated from the mass a substance that later experiments proved to be a kind of lilac dye. This he called mauveine sulfate, and from it the color mauve is secured. If the discovery was made by the same kind of magnificent accident that led Christopher Columbus to America the boy realized instantly its importance.

### The Celebration.

A few days ago Sir William Perkin sat in the Royal Institute of London surrounded by some of the most noted experimental chemists of England and the Continent. The coal-tar color jubilee, the gathering was called, and the purpose was to commemorate the discovery of the dyes and do honor to the great chemist whose investigations gave them to the world. A portrait of Sir William and a statue were presented to him, both to become the property of the nation after his death.

A considerable sum of money also was raised in honor of the event, to constitute the Perkin fund for the encouragement of chemical research. From all quarters came congratulations, tributes, honors and degrees for Sir William Perkin, and perhaps for the first time he was made to appreciate the size of the debt the chemical and manufacturing world owes him.

### A Classical Hall.

A wealth of historic association is attached to the room where the presentations were made. There it was that Faraday discovered the hydro-carbon benzene in 1825, and before the speakers, as though to stimulate their eloquence, lay on a table the original specimen of benzene, discovered 81 years ago. There Davy and Tyndall worked and Hofman lectured. Speaking of Faraday, Sir William said that he remembered as a boy writing to ask for a ticket that would admit him to one of his lectures. Faraday was about to deliver on electricity. Back came the order, written in the great man's own hand, in less than half a dozen years the enthusiastic schoolboy was to read a paper on "Coloring Matter Derived From Coal Tar." And Faraday was to sit and listen to him. Between the discovery of benzene and mauveine sulfate there was an intimate connection, for benzene was the initial product for the production of aniline. Bishop Berkeley, who worked two centuries ago, was recognized by Sir Henry as a scientific ancestor. He was a greatly indebted. He also heard the most generous compliments to Hofman, Cahours, Pasteur, Berthelot and Wurtz.

### His Father's Trust.

Sir William's speech was notable for its modesty. He declared that his greatest regret was that his father and brother were not living to stand beside him, and share with him the honors of the occasion. They deserved it as much as he did. He was a boy of 18 when the discovery was made, and apart from chemistry, knew no more than another 18-year-old boy. His youth was a tremendous handicap when he sought for financial backing to turn his discoveries to commercial account. His father, however, risked all his savings in the new venture, and the firm that manufactured the first aniline dyes was Perkin and Sons, a brother having also joined the enterprise. A youth of 18, William had never been inside a chemical works. The raw materials had to be got together, the processes of manufacture devised, special apparatus designed, and when the dye was made the right way of using it had to be found out. Sir William realized that he was not a chemist, and his brother lived long enough to see their confidence rewarded, and the undertaking a financial success, as well as a recognized scientific triumph.

### A Benefit to Germany.

When the mauve dye was discovered the silk dyers took to it readily, but the manufacturers of calico and cotton did not, until Frenchmen led the way. The silk dyers realized their mistake and quickly rectified it, but what must be said about the aniline dye industry itself? Discovered by an Englishman in a land where it should have found its greatest market, it was only a few years until the war began was transplanted to Germany. The German chemists at the jubilee admitted the debt their country owed to Perkin. One of them said that he and his colleagues were gardeners in a beautiful domain planted by the English scientist fifty years ago. Prof. Armstrong, writing to the Times, says:

"During the last quarter of a century the color industry has certainly been the mainstay of the German universities; a great army of workmen, fed by accomplished, highly-trained foremen, has been engaged in its service; and engineering appliances of the most refined character have been introduced into the works. It is probably safe to assert that no other industry requires the same amount of insight and grasp of principle, and that no other industry deserves so fully to be termed a scientific industry—in point of fact the modern color works is nothing more nor less than a scientific laboratory on a large scale, conducted with commercial ends in view, the color manufacturer having to deal with the most recalcitrant of scientific problems."

It is a pleasure to know that Sir William Perkin is alive to hear his praises sung. After 20 years spent in successful technical work, he returned to pure science and gave to the chemical world those fruitful methods known as Perkin's Reaction. The goal toward which he was passing when he made the discovery of mauve has never been reached, nor would it be of more than casual scientific interest should it ever be attained, for the Dutch have carried the cultivation of cinchona bark to such a degree of perfection that the artificial manufacture of quinine would never be a commercial success. The only regret proper to the occasion is that England was not the greatest gainer by a great Englishman's work.

## JUST FOUR MORE DAYS

## ...OF SUMMER SELLING

After that we will have something to tell you about the tons of New Fall and Winter Goods that are daily crowding in upon us. During the balance of this week you can buy Summer Goods here at a fraction of regular prices. They must be cleared out in order to make shelf room for the new comers.

### DRESS GOODS REMNANTS—

146 ends of choice dress goods 11-12 to 6 yards long, including tweeds, plain cloths, panamas, voiles, etc., suitable for girls' dresses, ladies' skirts, waists, etc., clearing at

Almost Half.

### NEW SILKS AT 50c YARD—

Rich pure silks, including 20 inch colored French taffeta silks, 22 inch black French taffeta, 22 inch Geisha silks in black and colors, 27 inch Japan taffeta, excellent quality in good range colors, the biggest and best silk values we have ever shown at a yard

50c.

### BIG VALUES IN DRESS GOODS.

Lot 1—27 pcs. dress goods including all wool velvets, tweeds, serges, plain and fancy molars, etc., good range colors, regular 50c. and 55c. a yard,

19c.

Lot 2—21 pcs. choice dress goods including all wool velvets, tweeds, serges, panamas, etc., regular 75c. and \$1.00 a yard,

39c.

Lot 3—Includes 54 in. suitings, tweeds, chevots, homespuns, 45 in. granites, panamas, etc., regular 75c. and \$1.00 a yard,

58c.

### SNAP IN PRINTS AND WASH GOODS

About 600 yards wash goods including 32 in. prints, fine Scotch ginghams, dimities, lawns, batiste, etc., sold regular at 12 1/2c. to 35c. a yard,

Clearing at 8 1/2c.

### CARPET SAMPLES—

Manufacturer's samples of Tapestry Brussels and Velvet Carpets in lengths of 1 yard to 2 yards each, choice patterns, just right for rugs,

Clearing at Almost Half

\$3.00 Lawn and Linen Waists, \$1.89.—The balance of our Finest Linen Organdy and India Lawn Waists, sold regular up to \$3.00 each,

Clearing at \$1.89.

## The Northway Co., Ltd

### An M. P. But Not a Voter.

It is strange for people on this side of the Atlantic—with its registration of voters in Ontario and Manitoba and its recording of all qualified to vote across the border—to read in The London Daily Chronicle that, although Mr. Austen Chamberlain has been a member of the House of Commons at Westminster since 1892, he has not been an elector after his marriage a few days ago, when he became a householder on his own account, and thus qualified to exercise the Parliamentary franchise. Hitherto, although an M. P., he could not legally enter a polling place. The fact was once utilized by his father to illustrate some of the anomalies and absurdities of our electoral system. "Let me take a concrete case. I have a son. He does me the honor to dwell under my roof. He is legally qualified to occupy a seat in this House, but the law will not permit him to vote in any election of a member of this House." And that son was Chamberlain of the Exchequer, and controlled all the manifold strings of John Bull's purse. Yet he could not vote at a Parliamentary election!

### A Davitt Story.

The Tribune of London in speaking of Michael Davitt gives this characteristic story of the Irish patriot while in prison: "This high strung and keenly intelligent man was put to a task for which he was physically unfitted, that of pulling trolley loads of stone through the quarry, and many a time a poor wretched criminal, sympathizing with the one armed man, would give an extra pull to spare his disabled chum. A few months ago Davitt was passing down Ludgate Hill and was startled to see this Christian criminal selling pennyworths at the kerb. Needless to say, Davitt bought his whole stock and a day or two later set him up in business with a new and better stock. 'I have kept straight, Mr. Davitt, so help me, God,' the poor fellow protested."

### Lord Chancellor and Motorists.

Sitting in the Court of Appeal at the law courts, and giving judgment in a matter which arose out of personal injuries inflicted on a cyclist by a motor-car, the Lord Chancellor said it was desirable that drivers of motor-cars, as well as of other vehicles, should realize that not only able-bodied people, but deaf, blind and nervous people, decrepit, old people and children, were quite as much entitled to the use of his highway as they, and that if anyone thought proper so to drive that there was no chance left of averting serious consequences, and a mistake of judgment or miscalculation be made by a wayfarer, the driver would have to pay for it in damages.

The fruits of a falcon's industry do not always grow on his family tree.
