to those of the Provinical University London, Sept. 27 .- In the British Palace of Applied Arts at the White City a wonderful clock was yesterday placed on view. Standing twelve feet hight, it is an exact reproduction of the great seventy-foot clock tower in the Square of St. Mark, Venice. The four stories of the tower in the model, as in the original, are constructed of solid white marble, with panels of colored Carrara marble and mosaic of

gold and lapis-lazuli. Above the archway which forms the bottom story of the tower are dials indicating the hours, months and phases of the moon. The central dial is of black enamel, spangled with golden sion through the streets, the students gilt, representing the moon, and arin 291/2 days. Round this dial a golden sun revolves. Turning with the sun, but at a different speed, is a circle marked with the signs of the zodiac, and outside this is another circle marked with the hours of the day.
