Export Contact: Mr. John L. Webster, Vice President

Manrex Limited specializes in medication delivery systems for long term care, acute care and home care situations. Since its introduction in 1973, Manrex has revolutionized medication delivery in long term care facilities. The efficiency, medication security and time savings produced by their systems has resulted in wide-spread acceptance in nursing homes, psychiatric institutions and hospitals large and small across Canada and internationally.

Manrex Limited was the inventor of the Controlled Dosage System (carded medications for long term care) in Canada. Manrex Limited is the only company to truly offer a complete system of medication distribution to nursing homes. While other companies offer only component parts, the Manrex system includes training manuals, procedure videos, educational training and complete charting and administrative reporting.

Manrex Limited manufactures the majority of its products in Winnipeg and also acts on behalf of many companies from Europe and the United States in the Canadian marketplace. Currently, Manrex Limited products are licensed and sold in Great Britain (Boots Pharmaceuticals), Australia, New Zealand, Malta and the Benelux countries. Manrex is currently pursuing programs in Thailand and Africa. Although smaller by pharmaceutical industry standards, Manrex Limited is a growing concern. The firm's size is an advantage, and by specializing in a specific market niche, they have developed a high level of expertise and a solid reputation in an important healthcare sector.
