

hay. The weather being very hot, she sweated a good deal, and frequently wiped her face with her apron. She said there was milk-weed and poison-ivy in the hay, and to this she attributed the condition of her face. Her face was quite well when she went to bed, but on awaking in the morning it was all red and swollen, her eyes

FIG. 1.

were closed, and she had numbers of large blisters on her cheeks. The blisters rapidly increased and coalesced. (Fig. 1.)

On examining her I found that on each cheek were several huge blisters, extending from the lower border of the orbit to the inferior maxilla; there was also a patch of large vesicles on her forehead,
