

## *with Northern Electric Two-way Radio*

Reaching the scene of disturbance in as little time as possible is one of the major factors in successful law enforcement. Shortwave radio is the latest weapon of science to maintain law and order—patrol cars can report to headquarters by simply lifting the telephone receiver. Reporting location — asking for aid — always ready for split second action.

You can go right on using your present one-way radio system. To modernize it—make it two-way—equip cars with Northern Electric ultra-high frequency transmitters and install a receiver at headquarters. Car equipment is compact, easy to operate, thoroughly dependable. One-way radio purchased now may be converted to two-way later.
