WINDSOR "DELMONICO" RANGE.

For Hard or Soft Coal or Wood.

One of the most elegant Ranges ever produced, in equal measure, value, economy or beauty. The latest of the latest improvements in design.

It is of full size and very beautiful in appearance. Various proportions, finishes, decorations and other adaptations, with full panel nickel doors, and polished exterior surfaces, in a rich and highly artistic style.

The Reservoir is of heavy copper finished, made on an improved plan, heating the water quickly to a high temperature.

The direct draft-damper is so arranged, that the smoke and heat can be allowed to pass directly into the pipe, controlling the draft and consumption of fuel, a very great convenience when the draft is poor, chimney cold, and in warm weather when it is undesirable to heat up the kitchen.

It is provided with an excellent ash-shifter, arranged to shake and dump, with an anti-clinker grate, perfect in its working.

The ovens are properly ventilated, carrying off the odours of cooking, adding to the draft, and preventing one article becoming impregnated with the taste of any other cooked at the same time.

By removing the two covers and centre-piece, over fire-box a broiler-cover can be used for grilling purposes, thus supplying a long felt want.
