What Standardization Means to Motor Car Buyers

IT means YALUE. Just to the extent that a car is standard-ized does the buyer's dollar approach the maximum of purchasing power.

Standardization means definite, proved quality, known manufacturing costs and reduced selling

fonts. Of the million autos that will be sold in 1916, 75% will be standardized cars selling for less than \$1000.00 each. This remarkable American achievement is the direct result of standardization. Finally the upholstery has been standardized by the almost universal adoption of

MOTOR QUALITY

40% of all 1915 cars sold were upholestered in this provid, guaranteed material and in 1916 the total will be at least 60%.

Fabrikood is the only standardical florogrobile upholestery. It wears better than coated splins (commonly sold as "genuine leather") and has the artistic appearance and luxurious comfore of the best leather.

holograph will, by letter, or by a verbal statement substantiated by witnesses. This section applies to all the provinces of Canada, with slight difference in Que-hec.

hee.

All wills are carefully examined here, the domicile decided, and the intention of the testator is carried out as far as possible. A military will can only dispose of personal estate. Real estate is in no way affected unless there is a will duly executed and attested by witnesses according to the ordinary legal practice. This is a point which should be brought to the attention of the soldier, when he is making his will, as sometimes it is impossible to carry out his full wishes after death. after death.

impossible to carry out his full wishes after death.

The legatees named in the will are all notified, a certified copy is forwarded to them, and an identification form is enclosed 'y completion and returned to the offic. I the Estates Branch.

The officer in charge of the Estates Branch is fully empowered by an Order in Council, dated 28th March, 1916, promulgated under the authority of the Regimental Debts Act, 1893, and are or der made by the Secretary of State for the Colonies, dated 3rd December, 1915, to decide all questions of domicile, of validity of wills, of law and of fact, and to distribute all military estates in the manner laid down by the different sections of this said Act. No appeal can be taken from this officer's decision.

All estates are distributed without delay as soon as the necessary papers reach the office of the Estates Branch; but it must be torne in mind that it is always from four to six months at the very earliest before an estate can be legally distributed.

Numerous cases are delayed by a will turning up at the last moment, but every care is taken that no wrongful distributions are made.

In the case of missing men, thirty

care is taken that no wrongful distri-butions are made.

In the case of missing men, thirty weeks must clapse before the necessary steps can be taken to presume death (a presumption entertained for official pur-poses only) and the estates of such miss-ing men cannot be distributed until four-months after such presumption of death has been made.

H. SPENCER-RELPH. Officer i/c Estates for A. A. P.M.G.

HAZARDS IN HANDLING GASOLINE

In connection with investigation regarding safety and efficiency in the use of petroleum and its products, the U.S. bureau of mines has made numerous tests of gasoline. In Technical Paper No. 127, by G. A. Burrell, are stated the hazards that may result from handing these liquids and the precautions to be observed.

the hazards that may result from handling these liquids and the precautions to be observed.

Gasoline vapor mingles with the air in the same manner that water vapor does, the amount carried depending upon the temperature of the air and the readiness with which the vapor can be obtained. If one takes the cover off a full pail of tightly enclosed gasoline and applies a match to the surface, the gasoline will flare up and burn as long as the gasoline lasts. On the other hand if one puts a few drops of gasoline in a small tightly enclosed pail, waits a few minutes and then produces a flame or electric spark, a violent explosion will likely result.

In the first case the vapor burns as fast as it comes from the gasoline and mixes with the oxygen of the air, whereas in the second case the oil vaporizes in the pail and mixes uniformly with the air to form an explosive mixture and upon ignition explodes.

One gallon of gasoline when entirely vaporized produces about 32 cable feet of vapor. If a lighted match could be applied to pure gasoline when entirely vaporized produces about 32 cable feet of vapor. If a lighted match could be applied to pure gasoline when entirely vaporized produces about 32 cable feet of vapor. If a lighted match could be applied to pure gasoline when entirely vaporized produces about 32 cable feet of vapor. In the absence of air, no fire or explosion would result. At ordinary temperatures air will hold from 5 to 23 per cent of gasoline vapor, depending upon the grade of gasoline. In 100 parts by volume of air and gasoline, as explosion would not take place if there were more than 6 parts of gasoline, or less than 1.4 parts. In other words, the explosive range is between 1.4 and 6 per cent of vapor. One gallon of gasoline can, under ideal conditions, render 2.100 cable feet of an explosive mixture. If, J. Wilson, Colorado Agricultural Guilege.
