A New Rose.

A new rose has just been sent out which is grand enough to be reckoned as the horticultural glory of the nineteenth century. It was first introduced as the 1900, but now by vote of the patrons it is renamed the Helen Gould. Its centre is imbricated, its outer petals rolling open freely. In other words, it combines the two styles of flowers. The color is a rich cherry red, with a good perfume, though not as sweet as some of our roses. It is a hybrid tea, which blossoms continuously as a tea rose that is, all the time. It is absolutely hardy and a strong grower. It should have been named the Nineteenth Century. It is all in all, the climax of rose growing.

Place alongside it the Jubilee, a remarkable hybrid perpetual, with vigorous growth, splendid form, almost constant bloom, and a color that if it does not sur pass all others is fully at the front, a clear red, shading into crimson; then add to these the grandest of all the new hybrid tea roses, the Liberty, even finer than the Meteor, always in bloom and of extra strong growth. But do not leave out the Meteor, a rose continuously in bloom, of the deepest crimson color and very thrifty growth. Having these, add the Mrs. Robert Garrett, another remarkable grower, as fine in perfume as the best; color shell pink, and every flower standing on a long stem. The President Carnot should com in surely with the above as one of the finest garden roses ever produced. It gives perfect flowers all the time and of exquisite shape, color a rosy flesh. One more rose and my group is complete—the Kaisetin Auguste Victoria, a hybrid tea, with ele gant long pointed buds, color creamy white and deliciously fragrant. The flowers are on strong stems, and the foliage is as fine as the blossoms. I do not know of a more remarkable group of roses than the above if we consider quality and capacity for giving general satisfaction.—(P.

* * * Farm Labor in Great Britain.

ER

ity

The returns of agricultural wages for a eries of years show that during the last half century they have been steadily rising. On the basis of a number of returns from farmers and others whose families have occupied a farm for a long period of time and who have also kept and preserved accurate account books, it appears that the weekly cash wages of ordinary agricultural laborers were 48 per cent higher in 1809 than 1850. The information as to the rates of wages paid during the last five years is of a much more complete and detailed character than for earlier years, From 1895 to 1900 there has been a progressive upward movement in England, Wales and Scotland. In Ireland rural wages have not altered much during the last ten years, but such changes as have taken place have been in an upward direction

The rise in pay in England, Wales and Scotland during recent years is attributed

IN HIS VALISE A Doctor Carries Grape-Nuts Food.

A Doctor Carries Grape-Nuts Food.

A physician in McDade, Tex., who cured himself by the use of Grape-Nuts food, says: "Lagrippe left me a physical and nervous wreck, with indigestion, dilated stomach, constipation, and neurasthenia. I tried electricity, vapor bathsp traveling, camping, and medicines, ad nauseum.

"Finally I put myself on Grape-Nuts food, and before the first package was gone, I made such an improvement that it seemed difficult to belleve. I finally got to carrying Grape-Nuts in my valise, and in my pocket when I didn't have a valise. Vesterday I secured a new case of two dozen packages.

The facts are that I could eat, and did eat, digest, and assimilate the food and gained remarkably in strength. I am now regularly attending to my practice. I have been twenty years in practice, and am free to say that Grape-Nuts food is the most perfectly and scientifically made food I have ever known. My name, for professional reasons, should not be published." It can be given privately by those who care to inquire, by the Postum Cereal Co., Ltd., Battle Creek, Mich.

by employers to the scarcity of labor. The more skilled and educated men prefer to seek employment in other industries. Farmers in England state that there is special difficulty in getting young men to take charge of animals, partly due, it is said, to their objection to Sunday work Employers of labor have complained for many years of the difficulty of keeping the ounger and more efficient men on the land, but never has the complaint been so general as at the present time. The calling out of the reserves and the militia toward the end of 1899 and in 1900 has accentuated the scarcity in many districts. The wages of men in charge of animals are considered separately from those of ordinary agricultural laborers. Such men have greater responsibilities and work longer hours than ordinary farm hands. They also have Sunday work, and are liable to be called up at any time when their animals They are, therefore, paid somewhat more highly than their fellows, and their term of engugement is generally longer .- (London Standard.

* * * Winter Protection of Plants.

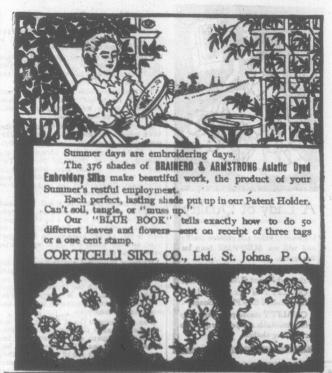

It should be well known to advanced gardeners by this time that light is as great an agent in destruction by frost as frost alone. But little practical advantage has been taken of this knowledge, except by gardening folk generally, of what the advanced gardeners know. The latter shades his greenhouse when he finds the plants frozen, and he plauts rhododendrons and similiar plants where the sun does not strike them in frosty weather, if he should have any choice in the selection of a site. In the extra cold region of the Northwest the advanced gardener shades the trunks of his fruit trees by placing boards, fastened together like tree boxes, up against them. And thus the trees escape sunscald arising from being under the sunlight, and similar troubles.

Surely orange growers in Florida might profit by this experience of their Northern brethren. It would not be a very expensive thing to make an arbor of lath over an orange grove, the lath being an inch or so apart. With such a partial shade the lants would pobably endure ten or twelve spasmodic degrees of frost without injury, and the shade in summer would doubtless be all the better for the trees, at least the trunks of the trees might be boxed, and even filled with earth if the weight could be supported. If the tops should suffer from frost, the strong trunks would sooner recover than when the whole tree was killed to the ground .- (Meehans' Monthly * * *

Use Skimmilk

Skimmilk is a food which contains muscle and flesh forming material in s form to be readily taken up and digested Milk that has been skimby the system. med has really lost but a small amount of its value as a food, the cream consisting considerably of fat, which in itself is the least nutritious part of the milk, except to create warmth. The cheesy matter left in the milk is its most valuable part for food and tends to produce a food and tends to produce a vigorous, healthful growth when fed to calves, pigs and chickens. if chickens were fed less corn and more skimmilk, it would not only be to their lasting benefit, but it would also eventually result in financial benefit to the farmer.—(Poultry Keeper.

Familiarity with the prevailing standards of etiquette gives a young man a distinct advantage, and he who is sure that he knows is at ease and conforms automatically to social requirement. None can be perfect in deportment who has to stop to consider how things ought to be done. If a man be a gentleman at heart the outward polish is easily acquired—between manners and morals the tie is intimate. A true gentleman is simple, unpretending, natural. He is courteous and considerate, and has the personal dignity that comes of self-respect, not self-consciousness. He treats every woman as a lady, speaks well of others and recognizes hospitality as a mutual obligation.—October Ladies' Home Journal. Familiarity with the prevailing standards

Painters' Kidneys.

The worst thing a painter has to con-tend with in the turpentine.
The lead, of course,

DOAN'S KIDNEY

will fix them up—take out the inflammation and congestion, give ease to the aching

and congestion, give ease to the aching back.

Mr. J. Evanson, the well-known painter and decorator, 50 Oxford St., Toronto, Ont., said: About eight weeks ago I was taken with an excruciating pain in my back over the kidneys. If was so bad that my wife had to apply hot cloths till the doctor came and gave me morphine.

He said the trouble was due to a stone passing from the kidney to the bladder.

My water was loaded with a brick dust deposit and scalded on passing.

While in this condition I heard of Doan's Kidney Pills and started taking them.

It was not long before I got relief from pain and have been improving in healthever since. My urine is now clear and does not smart me, and I feel better than in years.

LAXA - LIVER PILLS. These little track fellows act easily and naturally on the system, clearing away all bile and effete material. Constipation, biliomanes, dyspepsia, sick headache, heartburn, waterbrash—all disappear when they are used. Price 35c.
