Questions and Answers. Miscellaneous.

Crate Fattening.

1. Would you kindly advise me through the columns of your valuable paper the way to make crates for fattening chickens, and also tell how many chickens should be allowed in each crate?

2. What is the best ration while fattening? I read something about this in some paper, but have since lost it. Should chickens be in a building while crate-fattening-that is should crates be erected in some building? R.

Ans.-1. Provide crates about 18 inches square and of convenient length, with slatted bottoms to allow the droppings to fall through and slatted up and down in front to allow the birds easy access to the feeding troughs. Divide the crates into apartments two feet long. These should each hold three or four birds, according to size. Place on treetles to bring to a convenient height and also to allow the droppings to fall through; if the crates are more than one tier high, a space of four to six inches is left between the tiers. In this space is slid a shallow galvanized-iron pan, which catches the droppings from the crate above. A board with a notch in it is nailed to each end of the crate and supports a trough usually made of half-inch by three-inch or half-inch by four-inch boards, made of planed lumber, so they can be easily kept clean. Crates made in six-foot sections are handy.

2. A very successful crate-fattener thus described his method in "The Farmer's Advocate" a year or so ago: "Stir up a wet mash of ground main, fairly thin, and let set over night, or, if in the morning, until night, so it will get just a little acid, but not really sour. I generally feed a mixture of about equal parts ground oats and corn, with some low-grade flour added. If you have milk available, by all means mix the mash with it; if not, use water and add a little meat meal. I have had very good results using ground barley, and I know some very successful feeders who use a proportion of ground buckwheat. It has been my experience that it does not make so much difference what you feed as how

"I begin by feeding lightly for the first day or so, just putting a little in the troughs at a time, so as not to give all they will eat at first, else they will gorge themselves, and when that occurs it is best to let the birds run for a week or so, and then put in the crates again. When the birds seem to have almost enough, clean out the trough and water to drink. This may be kept in the trough until next feeding time.

"About the third day give them all they will eat in half an hour in the morning, then clean the troughs and water. At night do the same. This done, the birds will be always ready to eat. About twice a week, provide plenty of grit. Keep a sharp eye out for any birds that refuse to eat. If you have any like this throw them out of the crate and let them run for a few days.

"If the birds are fed regularly morning and evening (long enough before dark that they will have plenty of time to eat) in about fifteen days to two weeks the breast-bone will be covered with flesh and the skin will have that soft kidglove feel. Some may take a little longer, but it is not advisable to cratefeed too long. I always judge by their individual condition. Usually three weeks is quite sufficient.

"I have tried feeding tallow the last week, but it seemed difficult to get the birds to eat it from troughs. With a cramming machine I would use it.

"In my opinion the secret of crate-feeding lies in regular feeding and being particular to clean the troughs after the fowls finish eating. This last is even more important than the first. My experience has been that where this is not done the fowl get poorer instead of fatter. If one cannot observe these two points and must leave the troughs full of feed, don't coop the birds up; let them run. Shelter from rain and winds should be provided, but very warm , quarters are not desirable."

Great Dispersion Sale of REGISTERED AND HIGH-GRADE

25 cows in milk, 31 heifers (all supposed to be in calf), 11 heifer calves and 3 bulls; also one reg. Clydesdale mare in foal, the property of Wm. Johnson & Son, Avon, Ont., will be sold without reserve on Lot 3, Con. 6, North Dorchester Tp., on
