

## The 1909 De Laval Model

Beautiful in Design  
Perfect in Construction  
Everlasting in Daily Use

### Is Cream Separator Perfection

ITS graceful outline together with delightful simplicity and convenience make it an ornament, as well as a daily source of profit in the dairy. There are ten different sizes to suit any number of cows from one to one hundred, and each machine in addition to

advanced ideas in separator construction possesses every feature which has made

### WE WANT FARMS, RANCHES

Larger tracts, anywhere in Canadian Northwest, to supply the increasing demands of our millions of clients. Send full particulars of your offering, including lowest net spot cash price. We have moved thousands of best families from the States into the Northwest. The prospect now is for a larger movement than ever.

MYRICK SYNDICATE, Springfield, Mass.

### Strawberry Plants for Sale

From my strawberry beds at Leduc and Ohrrville, Alta., for spring delivery. Prices, \$2.00 per hundred, add 40c. for mail orders; or \$15 per thousand and express charges.

JAMES CHEGWIN, Leduc, Alta.

# Why buy another farm?

Are you thinking of buying another farm in order to extend your operations and produce larger crops? You will find it better in almost every way to build a new farm on top of the one you now have. Do not seek to farm more acres but make your land produce more bushels. If the farm you now have produces—say 35 bushels of oats per acre, instead of buying more land to get an additional 35-bushel yield, why not make the farm you have produce 70 bushels per acre? You can do it.

## Buy an I.H.C. Manure Spreader

It is the machine which enables you to take the manure produced on the farm and in a few years fully double the productive power of your land.

It does this by placing the manure on the soil in the most available condition to support plant life. It also makes the manure go further than can be done in any other way.

I. H. C. manure spreaders are made in two styles: Corn King and Cloverleaf.

**The Corn King** is of the return apron type. The steel roller equipment of the apron on this machine reduces friction to the minimum, even with the heaviest loads. This machine will be supplied with either a ratchet feed or a double pawl worm feed for the apron. Either of these feeds can be regulated to bring the desired amount of manure to the beater. The beater is equipped with long, square steel teeth with chisel points. It is driven by means of a chain from a large sprocket on the rear axle. A vibrating rake is used on this machine to level the load as it comes to the beater. The Corn King spreader has steel wheels of the most serviceable construction and a frame made of thor-

oughly air-dried wood stock and put together in a very durable manner. There are three sizes of this machine: No. 2 small, No. 3 medium and No. 4 large.

**The Cloverleaf** is of the endless apron type. It is also supplied with two feeds for the apron—ratchet or double pawl worm feed. The beater on this machine is constructed the same as the beater on the Corn King. This spreader also has a vibrating rake to level the load as it comes to the beater, has steel wheels and a well made main frame. This spreader is made in three sizes: No. 2 small, No. 3 medium and No. 4 large. It is very attractive, being well painted and symmetrically designed.

## Many Excellent Features

It is impossible to describe all of the features of the above machines in this small space. However, we have catalogs which illustrate and describe in detail the many excellent features of these machines. These catalogs are well worth procuring, not only because they describe the spreaders, but because they contain information on soil fertility.

Points that are well to bear in mind in connection with these spreaders are that you can top-dress your fields and grow large crops of clover to turn under and enrich the soil, so that you may grow still larger crops and add to the soil's fertility. They double the value of the manure, save much time and labor and greatly increase the value of your land by increasing the soil's fertility.

Any one of these machines will pay for itself in from one to two years, depending upon the amount of work you have for it to do.

Call on the International local agent and see about owning one of these manure spreaders. He will supply you with catalog and full information, or write direct to nearest branch house.
