As neglect or delay may result seriously, effective remedies should always be at hand. Apply at once a mustard poultice to the upper part of the chest, and, for internal treatment, take frequent doses of

Ayer's **Cherry Pectoral**

C. O. Lepper, Druggist, Fort Wayne, Ind., writes: "My little sister, four years of age, was so ill from bronchitis that we had almost given up hope of her recovery. Our family physician, a skilful man and of large experience, pronounced it useless to give her any more medicine, saying he had done all it was possible to do, and we must prepare for the worst. As a last resort, we determined to try Ayer's Cherry Pectoral, and I can traiy say, with most happy results. After taking a few doses she seemed to breathe easier, and, within a week, was out of danger. We and, within a week, was out of danger. We and, within a week, was out of danger. We continued giving the Pectoral until satisfied she was entirely well. This indisputable evidence of the great merit of Ayer's Cherry Pectoral has given me unbounded confidence in the preparation, and I recommend it to my customers, knowing it cannot disappoint them?" point them."
"Ayer's Cherry Pectoral cured me of a bad
cough and my partner of bronchitis. I know
of numerous cases in which this preparation
has proved very beneficial in families of

Young Children, so that the medicine is known among them as 'the consoler of the afflicted.'"—Jaime Rufus Vidal, San Cristobel, San Domingo.
"A short time ago, I was taken with a severe attack of bronchitis. The remedies severe attack of bronehitis. The remedies ordinarily used in such cases failed to give me relief. Almost in despair of ever finding anything to cure me, I bought a bottle of Ayer's Cherry Pectoral, and was helped from the first dose. I had not finished one bottle before the disease left me, and my throat and lungs were as sound as ever."—Geo. B. Hunter, Altoona, Pa.

'Why is it so unlucky to break a lookingglass?'
'I couldn't say, unless it shows the party doing it is without reflection.'

Mothers.

Castoria is recommended by physicians for children teething. It is a purely vegetable preparation, its ingredients are published around each bottle. It is pleasant to the taste and absolutely harmless. It relieves constication, reguharmless. It relieves constitution, regulates the bowels, quiets pain, cures diarrhœa and wind colic, allays feverishness, destroys worms, and prevents convulsions, soothes the child and gives it refreshing and natural sleep. Castoria is the children's panacea—the nothers' friend. 35 doses, 35 cents.

'Can you cook?' he asked anxiously ere he popped the question. 'I don' know,' she replied, 'but I—I can try. Not on me,' he rejoined, reaching for his hat.

Minard's Liniment for Bheumatism.

It is said to be the common law rule that if a woman makes a will before marriage the fact of her marriage makes the will void. This rule still prevails in a large majority of the States.

MESSRS. C. C. RICHARDS & Co. Gentlemen,-In playing tennis I wrenched my ankle, causing me much suffering and inconvenience, but by using MIN-ARD'S LINIMENT I was not confined to the house a single day. After a few days I was able to continue training for the sports at the Halifax Carnival for which I had entered.

PROF. ROBERTSON, DOMIN-

TALKS ABOUT THE SILO BEFORE THE PROVINCIAL FARMERS' ASSOCIATION.

Stenographed for Farmer by Harry Risteen. At the recent meeting of the Provincial Farmers' Association here. Prof. Robertson, Dominion Dairy Commissioner, spoke as follows re-

this afternoon, but I would like to first present to you some statements of what I think about silos by way of completing the talk I gave this morning. After your crop is grown, t seems that the most economica get back an average of 28 lbs. way of saving that crop is by using Corn ensilage, silos. The place to which we give the name silo is simply an artificia Ch. Pease, compartment in which are put vari-Oil cake, ous kinds of feed for feeding stock. C. S. meal, 0 The contents of a silo is called silage or ensilage. The silo is a building or compartment of any kind per No. 2. fectly air-tight, so as to prevent the Hay, material from moulding. The first Mangolds, 30 " silos were built in England in 1867, Grain, and the first became used in Canada and the United States in 1874, and No. 3, wooden silos first become used in 1885, only seven years ago. As I

nentioned this forenoon there in the they consume on the average, about Province of Ontario alone over 300 the same quantity of the first and of these at the present time, and at second, but the cows that get this the end of this year, there will be last ration gets somewhat more. over one thousand of them used in Fifty pound of the first costs 10 cents, that Province alone. With regard of the second 16 cents, of the third to the material from which silos can 20 cents and a little more, but I am be constructed, for economy the wooden silo is by all odds the most economical and best that can be just as much for feeding steers and just as much for feeding steers and made. In the first days of ensilage, farmers were accustomed to build si'os costing about \$3,000 but the most that are built now-a-days (03) cost, and if the cost is reduced be most that are built now-a-days (0)t about \$200. Now instead of going particularly into the manner of constructing a silo, let me give you just one statement as to how I built a silo two years ago. The sides were lined with paper. The first side was built of two ply of lumber, one tongued and grooved and the one tongued and grooved and the for a whole month, so that 10 acres other not, with a ply of building will feed 130 cows for a whole paper between them. The second month. Thus you see by having 10 ton, of corn for ensilage purposes a the same way as the first, one without the building paper.—The head of cattle.

paper, and the fourth was built of ing. Four pigs were put inio a pen one ply of lumber not tongued and weighing on the average 75 pounds grooved and no sheathing paper They were weighed every week and The ensilage was perfectly good of the food was weighed every day and all four sides for six feet, but below exactly what food they used was that on the side that single boarded kept account of. They gained in with unmatched boards, there was a the first month 105 pounds. in the slight waste. That simply convinc- second 207 pounds, and in the third ed me of the fact that it need not be 194 pounds. In twelve weeks four perfectly air-tight, except near the surface of the ground. Still for ed during that period altogether economy and durability it will also 1,361 pounds of food. These pigs pay to have a building con structed of were fed on food that was steamed and two thicknesses of lumber and one fed hot. On the opposite side of the of building papar between. A great deal of waste in silos is due to the fact that the contents are not packed smaller breed and the same age, and Now as to the manner of filling the silos, I may say that the silos may be filled partly every day and partly every two or three days, but partly every two or three days, but be cold food and we are now particular in steaming our food for this particular attention should be given particular in steaming our food for this to the packing of the sides and cor-Now as to the manner of opening mixed feed will by using the corn ensilo and feeding its contents, the

Now I will not detain you any longer this afternoon on the manner of opening and feeding from silos. but I will say this in preference.

This Medicine combining Iron and Quinine with vegetable tonics, puickly and combined the policy Cures Dyspensia. Indigestion, Weskness, Impure Blood, Mala ia, Chills and Feverand Neuralgia.

names I will be most happy to have copies of it forwarded to you The silo requires no floor except that of clay which is better than For Intermittent La Energy, &c., it has no equal. cement, and we put a layer of straw down to the depth of three or four inches and we think it is better to

Double boarding on the outside is petition. He now wishes he could get at not much use in building silos, the only value of it being to keep out the cold wind from breaking through and freezing the contents, and so pastors in Moscow are overwhelmed with far as the silo is concerned, which is equests from Jews for baptism, in order built inside of a barn, it is unneces-

With regard to the food, I would say that during the last year we had a silo filled with mixed feed and one with pease for the purpose of out of the city afoot, chained in bands by trying the experiment as to which would be the best for pig-teeding So far the pease ensilage has been a failure for pig-feeding. It is not always necessary for a Government to make every experiment that it

We had four pigs fed on the pease ensilage, and they lost on a average a pound a week, then we had four pigs fed on the mixed ensilage from a smaller si'o and a very large proportion was wasted but it has not

corn ensilage we took special pains money ourselves. to make an experiment of two acres ground, taking into consideration the HINTS FROM AN OLD GARDEN- and with its milk ration measured lowing, harrowing, etc., the cutting of the crop, the filing of the silo, and the interest on the building and the cost of the corn ensilage to be ION DAIRY COMMISSIONER, they can put it in a sho at a cost of
