I CURE FITS!

When I say I cure I do not mean merely to stop them for a time and then have them return again. I mean a radical cure. I have made the closest study of FITS, EPILEPSY, or FALLING SICKNESS, a life-long study. I was by my study to cure the worst cases. Because others have failed is no reason for my not now offering a cure. I have cured hundreds of cases. A Free Trial of my infallible remedy. Give EXTRACTS and TO ORDER. H. C. WOOD, M. C., 186 ADELAIDE ST., WEST, TORONTO, ONT.

Price 25c.

BUYING FEED FOR STOCK.

It is no sure sign of miscalculation when the farmer finds in midwinter that he is obliged to purchase feed for stock that he is keeping. It only shows bad management when the stock feed will not pay for the extra feed purchased. If the farm is close to a city or large village, this may often be purchased to advantage. Generally, however, the gain to the land must come from feed bought and consumed thereon. Grain pays to buy better than hay or straw. These last are by no means so valuable as they are generally supposed to be, and on most farms are grown as largely as it is advisable to feed them. By purchasing grain, oil meal and wheat bran these home products are converted into a richer manure, and by judicious feeding they will extend the range of more concentrated food so as to feed stock a long time.

FARM AND FRESIDE.

Timely Hints Useful to the Farmer and His Household.

How many owners of sheep know the nature of the sheep's foot, and how delicate a thing it is? Sheep are frequently lame for want of attention to the construction and necessities. If one will examine the foot between the claws, an opening will be found which is lined with fine hair, the purpose of which is to prevent mud from getting into the opening. This opening is a canal or duct, which ends in a gland, and the duct is called the interdigital canal. The gland secretes a viscid fluid which escapes when in excess through this canal. The fluid lubricates the tendons of the feet, and keeps them soft and supple. When for any reason there is a surplus, the excess drains away through this duct.

If by any means this escaping fluid is retained in the duct, it hardens and closes the opening. Right here the trouble begins. Every mechanic who understands the nature of a box in which a shaft turns, and which is well oiled, knows how the closing of the oil-hole would affect the movement, and how the bearings would soon get hot. In much the same manner, the sheep's foot begins to wear and inflame, and get dry and hot when the duct is closed. The trouble is shown by the animal going lame. The result may easily be neglected, that the foot becomes diseased; the pus caused by the inflammation works down into the foot, and what is known as foot-rot then happens. At this time, with continued neglect the attachments of the hoof to the foot are sloughed away, and the hoof is lost, and for want of a hoof the sheep is lost. Virgil said 2,000 years ago, "sheep are always an unhappy flock." But their owners must be careful of the neglect of the shepherds. A sheep has a low nervous organization. It is meek and mild, and has little energy to resist misfortune, and when it is sick it hides and lies without any effort to help itself until it dies. A farmer must therefore give his sheep most carefully. The sheep should be counted every time they are seen, every day, and each one should be looked at carefully, so that whatever is wrong may be righted. If any are seen to be lame, the lameness should be traced to its source. A gland is found amiss, the foot should be washed with warm water, the opening freed and a little oil or carbolic vaseline injected.

SKIM MILK FOR MILCH COWS.

In parts of Ontario and Delaware counties it has been the custom a long time, and with gratifying result. No accurate data are recorded to show its actual value, but the practice is an extensive dairyman of the latter county, ever alert to investigate and adopt new and promising methods, says that "skim milk fed to cows will produce as much butter fat as will work fat if fed to pigs." Here is a gain of 20 per cent in the feeding value of skim milk when fed to cows instead of pigs, for butter fat is worth three times as much as pig manure. The method is simple, and may be used by the homestead farmer, where the swine are fed milk in warm water; the use of these disagreeable animals is eliminated from the dairyman's daily duty. When milk is fed to hogs grain must be added to make soil.

The dairyman quoted above would say that both grain and milk, if fed to cows, instead of pasture, would be much more profitable. Another result of feeding skim milk to hogs, if one experiment, station professor be correct, is that the manure produced is richer in nitrogen than the manure of the cow. It only shows bad management when the stock feed will not pay for the extra feed purchased. If the farm is close to a city or large village, this may often be purchased to advantage. Generally, however, the gain to the land must come from feed bought and consumed thereon. Grain pays to buy better than hay or straw. These last are by no means so valuable as they are generally supposed to be, and on most farms are grown as largely as it is advisable to feed them. By purchasing grain, oil meal and wheat bran these home products are converted into a richer manure, and by judicious feeding they will extend the range of more concentrated food so as to feed stock a long time.

CIDER VINEGAR.

A farmer wishing to make a barrel or two of vinegar from his own orchard should, after making the cider, be careful to rack it off clean from any sediment. Keep the barrels filled to the bung and in a warm situation. As the impurities work off and flow out the bung hole, fill up each day until it ceases to work. Now elevate the barrel about four feet, open the spigot so a little stream of cider may flow from the upper directly into a barrel placed immediately under the first one. The oxygen of the air will change the cider into good vinegar in one-half the time that if the old process was allowed. It will be found best to have a stock of old vinegar on hand, and when the cider ceases to ferment, it is run into vinegar casks containing some twenty or more gallons of old vinegar. Any one saving but one barrel of cider that he wants to turn into vinegar, should buy five gallons of strong cider vinegar, add it to the cider and keep the barrel in a warm room, and by next season it will be fit to use. Do not add water either to the cider or vinegar, as it injures its keeping qualities and its strength. Good cider vinegar is worth from thirty to forty cents per gallon, and is in demand. Vinegar makers of experience and honesty have no difficulty in selling their entire make.

HOUSEHOLD HINTS.

Such as Young Housewives May Well Make a Note of.

One of the hospitals has found that common salt is the best thing for moths.

Perfumed oil sprinkled on library shelves, such as oil of cloves, will prevent moths on books.

Milk cooled by aeration is found to keep longer, and to be of better quality, than that cooled by ice.

A cat bite may be relieved by binding fat salt pork on the wound for a day or until all the soreness is relieved.

Glycerine and rose water, mixed in the proportions of one-third glycerine to two-thirds rose water, is very good for the hands.

The essence of peppermint will cure an inflamed eye. Four five drops in half a wineglass of warm water, and then drop into the eye.

Lemon juice will whiten frosting, cranberry or strawberry juice will color it pink and the grated rind of orange will color it yellow.

The skin of a boiled egg is the best remedy for a boil. Carefully peel it, wet and apply to the boil, it draws out the matter and relieves soreness.

A warm bread-and-milk poultice, with a heaping tablespoonful of pulverized charcoal will cure carbuncles. Apply warm, and when cold apply again.

One method of softening hard water is to put four quarts of ashes into a bag and fill with water for an hour, and pour the eye into a barrel to be used in washing. The ash will soon become clear.

Oilcloth which has been in use and is soiled should be scrubbed clean, using a little soap as will be necessary for the purpose, and then varnished with oilcloth varnish which costs about fifty cents a pint.

For severe bleeding from the nose, by holding the arm of the patient up over the head for five minutes at a time. A small piece of ice wrapped in muslin and laid directly over the top of the nose will usually give relief.

One of the most useful articles in a household where there is much dressing done at home is a wire skirt form which may be extended to represent any size of the waistline or hip. The waist form has not proved especially practical, but the skirt form is most useful.

To extinguish a burning chimney shaft all the doors and windows so as to prevent any current of air, and then throw a few handfuls of fine salt upon the fire, and drop on it white or transparent oil. This is a prompt extinguisher of confined fires.

Clover hay, cut fine, and cooked or scalded, makes an excellent mess for the hogs, especially if a small quantity of bran be sprinkled over it. The hog should have bulky food as well as the horse and cow, and to feed it exclusively on concentrated food will not induce as good results as a mixed diet. A hog fed on clover hay will fatten as readily as on corn alone, and the meat will be of better quality, but corn should enter largely into the ration.

To polish wood carvings, scroll work, etc., take a piece of soft and pliable wax, and rub it on the wood with the finger or French polisher, according to the color of the wood. Then wash the waxing in one thickness of linen, holding it by the surplus linen, so as to form a pad. Touch the pad with two drops of linseed oil. The oil is to make the wax adhere to the wood smoothly over the wood very little should be applied at a time. While using the pad on the scroll work add another drop or two of oil and then wet it in the polish as observation may show it to be necessary.

THE HEAD SURGEON.

Of the Lagoon Medical Society is now at Fredericton, Canada, and may be consulted either in person or by letter on all chronic diseases peculiar to man. Men, young and old, who are afflicted with nervousness, nervous headache, and exhausted, who are broken down from excess or overwork, suffering in many of the following symptoms: Mental depression, premature old age, loss of vitality, loss of memory, loss of sleep, constipation, dulness of hearing, loss of color, desire for solitude, excitability of temper, sunken eyes surrounded with leaden circles, oily looking skin, etc. are all symptoms of nervous debility that lead to insanity and death unless cured. The writer of this article has cured hundreds of such cases, and his patients, who were once thought incurable, are now enjoying the best of health. He is now in Fredericton, and is receiving a large number of patients. Those who through abuse committed in ignorance may be permanently cured. Send your address for book on all diseases peculiar to man. Book sent free. Heart disease, the symptoms of which are faint spells, purple lips, numbness, palpitation, skip beats, hot flashes, rush of blood to the head, dull pain in the heart which beats strong, rapid and irregular, the second or third quicker than the first, pains about the breast bone, etc., can positively be cured. No cure, no pay. Send for book. Address M. V. LUBON, 24 Macdonell Ave., Toronto, Canada.

The only variation in quality which will be found in "Myrtle Navy" tobacco is in the degree of moisture which it contains. Tobacco is a very ready absorbent of moisture, and unusual moisture of the weather it may become a little too moist or a little too dry to suit the taste of some. This is a minor matter, however, as the essential quality of the tobacco is not changed. Its combustion is a little faster according to the degree of moisture that it is in. The darker the plug the greater the moisture, and many prefer the dark. In each cavity, however, the preference for either can be met.

"William Weckback, you are charged with being better than your wife." "The charge is correct, your honor." "What are you smiling about, then?" "I have reason to smile. We have been married five years, and in all the scraps we've had this is the first time I haven't come out second best. Have a cigar, Judge."

CABINET RECONSTRUCTION.

A popular topic is cabinet reconstruction, which really does not concern the public mind as the reconstruction and cleaning of the human system against the approach of spring. The premier medicine for this purpose is Burdock Blood Bitters, and both parties concerned as the best purifier and general system regulator known.

UPPER HAYNESVILLE.

UPPER HAYNESVILLE, February 29.—Business is beginning to brighten up in this place.

We had a very agreeable call from a HERALD representative last week. By the extra size of the mail bag to-night (and the very large bundle of HERALDS it contained) tells the story that his visit was not in vain.

By the way what's the matter with the Millville correspondent. Lost his reckoning—or has he been out late. We were very much surprised to find out that John Lounsbury was running a store at Millville. His store is at Upper Haynesville corner. As he is a very modest man we will only add that his store is second to none, his goods of the very best quality, and his prices just right. Consistent with the quality of his goods, he is also post-master of this place. Any person giving him a call will be sure of courteous treatment and his right change back.

The sick in our neighbourhood are progressing favorably. Mrs. James Jones had been laid up for a long time, she is happy to state, although not strong, getting along nicely. Her son Henry is mending slowly. Mrs. Wm. Wiggins is now able to be up and around at her work. Samuel Wilson is improving slowly. The sickly child, spent last summer in Boston is now home with him, to cheer and nurse him in his severe sickness.

The boys are putting in good work coasting on the hill, they are at it morning noon and night. We trust there will be no accidents, but there has been some close calls.

Samuel Jones came home sick a few days ago. He has been working over in Maine. He is improved since coming home, there is no place like home he says, for the sick or well.

QUEENSBURY.

QUEENSBURY, March 1.—It is with regret we learn that for a long time, a much respected neighbor of ours, has had a severe spell of sickness, though at present his condition is somewhat improved.

A. J. Brown, jr., met with a close call last week, whilst working at a lodge truck. He slipped, and while he was running back over the stump, he caught his leg jamming it badly, and to cheer the sole completely off his foot. He is quite lame yet.

During the late warm weather there was a run of sap in the maples. It has agitated the mind of the farmer as he is not prepared to attend to it just at present and as the first runs are the best he does not like to lose it. Sugar making business is looking up; it pays better than any other work on the farm. There are extensive groves of maple here that are not tapped—many of them owned by men who are not so situated as to be able to run them; others lack capital. Now this is a paying business, and a ready cash business, why not our farm companies and work some of those large sugar groves? The outlay would not be great and labor at this time of year is plenty as it comes just after the break up of winter work and is over before farming begins. A number of lads and young men would rather enjoy working at this business, and anyone can in a short time make himself master of the art. Did our fraternal government offer any inducements much more sugar would be manufactured. Look at the sugar refineries, bonded by government, yet maple sugar sells in its raw state for twelve cents, in the face of Scotch granulated at four and a half.

BARONY.

BARONY, March 1.—A number of the young people paid the expected visit to Anderson Bros., camp and had a very pleasant time.

We are pleased to hear J. A. Scott's little girl, who has been very ill is improving.
