HOMEOPATHIC REMEDIES.

HERE, THERE AND EVERYWHERE

THE United States has 1,255 lighthouses and beacons, 32 lightships, 107 fog signals worked by steam, 187 by clockwork, 1,761 river lights and 4,286 buoys of various

So high has the wind been in Oklahoma lately that the sand blowing from the South Canadian River has formed high banks imprisoning water and forming a chain of lakes where none existed before. THE baya bird of India spends his spare

time catching mammorh fireflies, which he lastens to the sides of his nest with moist slay. On a dark night a baya's nest is said to look like an electric street lamp. WHEN the Duke of Monmouth was executed for treason his duchess ordered every

oak in the park to be cut on the fateful morning. The new growth, belonging to Lord Ebury, is one of the finest forests in THE indications are for a severe winter. The corn shucks are unusally thick, some The corn shocks are unastrated having as many as sixteen layers, the squir-rels are laying in larger supplies of corn and nuts than usual, and the geese have already begun to migrate.

DURING the recent trial of a skin manipulator in Great Britain expert evidence proved that the active ingredient in a popular lotion is corrosive sublimate, and that the cost of the preparation, which is sold for \$2.50 a bottle, was exactly 1 cent.

A DENTIST at Birmingham, England, has A DENTIST at Birm ingham, England, bus-just been mulcted in \$250 damages for the extraction of the whole of the teeth of a married woman. She only asked him to extract one tooth. Previous to the opera-tion she testified she could eat a crust or pick a bone with any one. THE vitality of a chicken thief in Riley

county, Kansas, was so extraordinary that with seven bullet wounds in his body which physicians had pronounced mortal, he ist himself down from the second story of a house where he was confined, and traveled 50 miles on foot before being recaptured.

DOUBTLESS three-fourths of the Amercans who visit the Bermudas pronounes the second syllable of the name as if it were spelled "mew," although Shakespeare in "The Tempest' has indicated for all time the original pronunciation of that syllable yealing the islands "the still vexed Bermoothes."

wire weighs 1-20 of a grain to the inch. One mile of wire weighs less than half apound.

The balance gives five vibrations every second, 300 every minute, 18,000 every hour, 432,000 every day, and 157,-ep. 200 every vear. At each vibration it

Bermoothes."

SEVERAL years ago two white spots were detected on the surface of the planet Venus, and have since been studied by M. Trouve lot in nearly 250 observations. The spots appear to be near the poles of the planet, and the eminent astronomer concludes that they are the summits of high mountains projecting above the opaque cloudy envelope which covers Venus.

A FLOWER has been discovered in South America which is only visible when the wind blows. The shrub belongs to the cactus family, and is about three feet high. The stem is covered with dead, watery-looking lumps in calm weather; these lumps, however, need but a slight brease to make

wind blows. The surub belongs to the cactus family, and is about three feet high. The stem is covered with dead, watery-looking lumps in calm weather; these lumps, however, need but a slight breeze to make them unfold large flowers of a creamy white, which close and appear dead as soon as the wind subsides.

AT a meeting of the Zoological Society of London Mr. Tegetmeier exhibited the feet of some Australian rabbits, to show an adof some Australian rabbits, to show an adaptation which is gradually brought about
to a new mode of locomotion. The rabbits
are becoming climbers, and often ascend
trees in their search for food; their feet are
said to be growing slighter, and the claws
longer and sharper.

It is now established that flowers and the
perfumes distilled from them have a salu-

tary influence and constitute a therapeutic agency of high value, and that residence in a perfumed atmosphere forms a protection from pulmonary affections and arrests phthisis. In town of La Grasse, France, where the making of perfumes is largely carried on, phthis is unknown. At Canton the average number of execu-

tions is about 300 per year, but in 1885 50,000 rebels were beheaded. Females are sometimes strangled and the worst criminals are nailed upon a cross. Sometimes the sentence directs that the criminal while living shall be cut into a number of pieces, which number never exceeds 36. The which number never exceeds 36. The headsman formerly received \$4 a head, but the supply and competition has reduced the wage to 50 cents apiece. Most of the criminals who are beheaded are water pirates or land bandits.

One of the most wonderful time-keepers known to the horologist was made in Lon thous for the past three market shows. 22. Nov. 22. Nov. 21. Nov. 22. Nov. 21. Nov. 22. Nov. 20. Nov. 21. Nov. 22. Nov. with her right hand resting upon a tiny clock fastened to the side of the vehicle. This beautiful ornament was made almost entirely of gold and was elaborately decorated with precious stones.

There are at least two well authenti-

cated instances on record of human beings provided with tail-like elongations of the spinal column. One of these is reported in the Asiatic Transactions (Calcutta, June, 1869), and the other in the journal of the British Anthropological Society. In the first instance the tailed human was a Moi boy of Cochin-China, the tail being about a foot-in length, but without a bony connection with the terminus of the spine. The boy was supposed to be 12 years old at the time the report was published, but the noted Oriental scholar who made the examination has since died, and the society has lost all track of the tailed Chinaman. The second instance mentioned was reported in the journal of the British Anthropological Society for July, 1890, and concerns two tailed Papuans, male and female, who were brought to England in the spring of the year last mentioned above.

Watching the Heur-Glass. cated instances on record of human beings

the spring of the year last mentioned above.

Watching the Heur-Glass.

As a miser counts his gold night and day,
So I count the minutes told in the glass;
My eye is dim, my hair is thin and gray.

And I know I'm growing old as they pass.
When we approach "the sere and yellow leaf" of our days we are prone to look back regretfully. A clear conscience and sound health will lighten our gloomy reflections.

Health is the greatest blessing—Dr. Pierce's Golden Medical Discovery the greatest medicine. It arrests the progress of lung and scrotulous diseases, and cures consumption, or lung-scrofula, if taken in time. It is the king of liver-invigorators and blood-purifiers, and a powerful tonic, building up the dobilitated patient to perfect health. Contains no alcohol.

More than 10,000 babies were cared for by Miss Hall's nurses in the children's building during the six months of the World's Fair and only one of that number was abandoned by its natural protectors.

The 18 large cities of the south had, according to the last census, an aggregate population of 994,000. All these cities combined have a smaller population than either New York, Chicago or Philadelphia

MECHANISM OF A WATCH.

Wonderful Little Machine That Took Open your watch and look at the little wheels, springs and screws, each an in-dispensable part of the whole wonderful machine. Notice the busy little balance wheel as it flies to and fro unceasingly wheel as it files to and fro unceasingly, day and night, year in and year out. This wonderful little machine is the re-sult of hundreds of years of study and experiment. The watch carried by the average man is composed of 98 pieces, and its manufacture embraces more than 2,000 distinct and separate operations.
Some of the smallest screws are so
minute that the unaided eye cannot dis-

tinguish them from steel filings or specks of dirt. Under a powerful magnifying glass a perfect screw is revealed. The slit in the head is 2-1,000 of an inch wide. It takes 308,000 of these screws wide. It takes 308,000 or these screws to weigh a pound, and a pound is worth \$1,585. The hairspring is a strip of the finest steel, about 9½ inches long and 1-100 inch wide and 27-10,000 inch thick. It is coiled up in spiral form and finely

tempered. The process of tempering these springs The process of tempering these springs was long held as a secret by the few fortunate ones possessing it and even now is not generally known. Their manufacture requires great skill and care. The strip is gauged to 20-1,000 of an inch, but no measuring instrument has yet been devised capable of fine enough gauging to determine beforehand by the size of the strip what the strength of the size of the strip what the strength of the finished spring will be. A 1-20,000 part of an inch difference in thickness of the strip makes a difference in the running of a watch of about six minutes per

The value of these springs when finished and placed in watches is enormous in proportion to the material from which they are made. A comparison will give a good idea. A ton of steel made up when in watches is a good idea. A ton or steel made up into hairsprings when in watches is worth more than 12½ times the value of the same weight in gold. Hairspring wire weighs 1-20 of a grain to the inch. One mile of wire weighs less than half

Effect of Lightning on the Body.

In describing the recent death of a boy by lightning a dispatch stated that an accurate picture of trees and foliage in the vicinity of the accident was made on the boy's body, which phenomenon was supposed to have been produced by the lightning in a manner similar to that of making pictures or photography.

This, however, is not correct. While such marks are observable occasionally on the bodies of persons killed they bear no relation whatever to foliage of sur-rounding trees, although they bear a certain resemblance to those objects. There tain resemblance to those objects. Here is really no photographing of the image of the trees on the body. That the actual cause is quite different can be proved by experiment in the laboratory. When electricity is discharged at high tension, as lightning is, on the surface of a body having a poor conducting power, a luminous arborescent image is formed showing the path of one or more of the

showing the path of one of more showing the path of one sparks resulting from the discharge.

This was most beautifully shown in the experiments carried out with high tension currents in London by Swinburne. The current would exhibit scattered lines of light that would develop into most requisite tracery and take the into most exquisite tracery and take the form of plants or trees. The theory of this phenomenon is that the irregular courses taken by the spark may be due

In the "Life of Rowland Hill," by In the "Life of Rowland Hill," by Mr. Charlesworth, published in London some years ago, there are many anecdotes of that remarkable man.

At one time when Mr. Hill was preaching for the benefit of a charity a note was handed to him, the writer of the benefit of a charity a note was handed to him, the writer of the benefit of a charity a note was handed to him, the writer of the benefit of a charity as well as the second was the second when the second was the second w

which asked whether it would be right for a bankrupt to contribute to the good "No." said the preacher after he had

read the note, "but, my friends, I would advise you who are not insolvent not to pass the plate this evening, as people will be sure to say, 'There goes the bankrupt.'"—Youth's Companion. Algiers Has a Stream of Natural Ink.

In Algiers there is a small stream which the chemistry of nature has converted into real ink. It is formed by the union of two rivulets, one of which is very strongly impregnated with iron, while the other, meandering through a peat marsh, imbibes gallic acid, another ingredient in the formation of ink. Let-ters and manuscript matter are satisfac-torily written with this singular natural ompound of iron and gallic acid.-Ex-

Liberal Tariff Platform.

We, the Liberal party of Canada, in convention assembled declare:
That the customs tariff of the Dominion should be based, not as it now is, upon the protective principle, but upon the requirements of the public service.

That the existing tariff, founded upon an unsound principle and used as it has been by the Government as a corrupting agency, wherewith to keep themselves in office, has developed monopolies, trusts and combinations:

It has decreased the value of farm and other landed property;
It has oppressed the masses to the enrichment of the few;
It has checked immigration;
It has caused great loss of population;
It has discriminated against Great Ritian.

Britain.

In these, and in many other ways, it has occasioned great public and private injury, all of which evils must continue to grow in intensity so long as the present tariff system

intensity so long as the present tarm system remains in force.

That the highest interests of Canada demand a removal of this obstacle to our country's progress, by the adoption of a sound fiscal policy, which, while not doing injustice to any class, will promote domestic and foreign trade and hasten the return of prosperity to our people.

That to that end, the tariff should be reduced to the needs of honest, economical and efficient government.

That to that end, the taril should ded to the needs of honest, economica and efficient government.

That it should be so adjusted as to make free, or to bear as lightly as possible upon the necessaries of life and should be so arranged as to promote freer trade with the whole world, more particularly Great Britain and the United States.

We believe that the results of the protective system have grievously disappointed thousands of persons who honestly supported it, and that the country in the light of experience is now prepared to declare for a sound fiscal policy.

The issue between the two political parties on this great question is now clearly defined.

The Government themselves admit the

The Government themselves admit the failure of their discal policy, and now profess their willingness to make some changes, but they say that such changes must be based only on the principle of protection.

We denounce the principle of protection

We denounce the principle of protection as radically unsound and unjust to the masses of the people, and we declare our conviction that any tariff changes based on that principle must fall to afford any substantial relief from the burdens under which the country labors.

This issue we unhesitatingly accept and unon it we await with the fullest condence the verdict of the electors of Canada.
