Local and Special News.

Town Council meets to-night.

Note E. E. Schaffner's change of address.

The sure and road Strong & Whitman's advertisement.

An electric fire alarm system has been installed in Annapolis.

Mr. S. N. Wear has had his new house lighted by electricity.

The Kings county Agricultural Society has just celebrated its 10th anniversary.

Dr. M. G. Marshall will be at his Bridgetown office from to-day till January 4th.

The Bridgetown Foresters court meets to-night to nominate officers for the coming year.

The annual meeting of the Baptist church will be held on Monday afternoon at 2.30.

The river is about five feet low again and a lot of business has been done at the mill.

Herbert H. Johnson, of Fredericton, has been transferred to Annapolis.

Rev. J. H. Strothard was somewhat indisposed last Sunday evening and his sermon on the promise was postponed.

Bridgetown streets must be improved next year. Probably no other town in the province has worse streets in winter.

The Robinson Concert Co. drew quite an audience to the Court House last evening. They had a capital funny man.

A new dominion government regulation makes the minimum length of lobster allowed to be caught in the Bay of Fundy, one and a half inches.

Mr. Gibbons has moved his horses and carriages from the Grand Central stable to his stable near the railway where he will in future conduct his livery business.

General Booth of the Salvation Army will arrive in St. John early in January 1898.

Several meetings of the Academy of Music, Halifax, later on in the month.

Mr. Beck with has strung a large main wire from the electric light station to the school house corner in order to provide for a large increase in the service in that portion of the town.

The Schr. Nugget arrived here last week with 1100 bushels of flour and meal and 200 bushels of oil for Kingston, St. John's, and is now about loaded with bales for the West Indies.

President Trotter reports that \$14,000 has been subscribed toward the \$50,000 which is being raised for Acadia University. When the \$50,000 is raised the total will be \$100,000.

Miss Mary M. Millam, daughter of postmaster George Millam, of Lake Louise, was drowned last Thursday in the lake at that place. She was skating and broke through the ice. The body was recovered soon after.

On the 7th inst. while playing at school, Leonard, adopted son of Mr. and Mrs. Lawrence Fancay, of Nictaux, had the misfortune to break his right leg. Mr. Miller was called and set it and at present the little fellow is doing as well as can be expected.

The interest of humanity, civilization, commerce and progress on the American continent, and the common welfare of these people demand that such overtures, offered in good faith, shall be received with a "good will." There is also reason to believe that the proposed reciprocity has many friends among the United States legislators and it is quite probable that a general change will be made in the existing customs barriers within a year.

In connection with the British advance into the Sudan, a discovery of incalculable value has been made: a discovery that will rob desert travel of much of its difficulty and possibly render the country quite habitable. In constructing the railway from Wady Halfa southward across the Nubian desert it occurred to the Canadian engineer in charge to dig for water, instead of utilizing the tanks of Nile water that were provided in tank cars for the use of the construction gang. Rightly felt before the same country, the desert an abundant supply of pure, sweet water was struck; eighty feet below the bones of the hundreds who had perished from thirst in the arid desert marches was an oasis at which the dying thirst might have been quenched. But it never occurred to the perishing one to dig; they were straining to catch a glimpse of the starry palms that mark the few brackish surface springs to be found in the wilderness of sand. The value of a thought is peculiarly illustrated in this case. The engineer's persistent will completely revolutionized the desert life. At a score of stages on the route have been dug with uniform success and it is in some of the same sections that the water is being pumped to the stations throughout all the parched regions of northern Africa.

Press dispatches of this week state that the Petersen Tilt company have failed to carry out their contract with the Dominion government for a fast line of steamers to ply between Canada and Great Britain. There have been so many stories told in this connection that we have some hesitation in believing the latest creation of the news makers. Months ago a similar story was current but it met with deserts from both parties to the contract and was generally dismissed, not however until a call had been made for the posting of a large guarantee by the contractors as an evidence of their ability and intention to complete the work. If they have failed to obtain sufficient capital to complete their contract, the most appropriate remedy is their inability to provide the service required for the contract price. Two ships were to be on the route in May 1899, and yet six months have passed and nothing has been done. Their failure will mean a long delay in the establishment of the line though possibly the twenty thousand pounds forfeit, which the company agreed to post will be a sufficient solace for deferred hopes.

Some idea of the extent of the trouble in India may be gathered from the fact that Sir William Lockhart has 70,000 native and English troops in the field under his command. The adjudication of the Afridis has proved to be a most difficult undertaking owing to the great disadvantages under which the troops of the punitive expedition have had to labor. There has been no open field work; their every advance has been opposed by ambushed fanatics whose fighting blood is of that strain that makes England's native Indian troops rank among the best fighters in the world. This campaign has been marked by many examples of personal heroism and big game bravery. The story of the splendid charge of the Gurkhas at Dargal pep has been told and retold, but it is one of those stories that cannot die; it will ever furnish an inspiration to the British soldier. The British losses have not been heavy but the troops have suffered much from cold and fatigue. The death statistics pay a tribute to the courage of the officers—thirty-two have been killed to every seventy-four men.

Meta Brand, who was tried, convicted and sentenced for the murder of Captain Nash, of the Harbord-Puller, is to be given a new trial. A new lease of life with a possible chance of dying a natural death. It was why it is that justice is so readily administered in the United States that a lawyer is that country are allowed trial after trial on what appears to be absurd and strained points of law so convincing evidence that something is wrong with the judicial system.

The Canadian reciprocity overtures are this year meeting with friendly reception outside of the legislative halls in Washington and the possibilities for closer trade relations between Canada and the United States are increasing daily. Boston and New York Boards of Trade have passed strong resolutions in favor of reciprocal trade relations and the influence of these corporations, representing the commercial giants of the eastern states, must be considered as much importance. The full text of the resolutions they have unanimously placed on record is as follows: "Resolved, that the New York Board of Trade and Transportation regards with deep interest the overtures made by Sir Wilfrid Laurier and the government of Canada, looking to better relations between that country and the United States. The spirit of comity, equity and good feeling demand that peace and concord shall prevail between this country and our nearest neighbor. The interests of humanity, civilization, commerce and progress on the American continent, and the common welfare of these people demand that such overtures, offered in good faith, shall be received with a 'good will.' There is also reason to believe that the proposed reciprocity has many friends among the United States legislators and it is quite probable that a general change will be made in the existing customs barriers within a year.
