

# THICK CREAM

Sells for One Cent More Per Pound  
Than Thin Cream

The creameries of the country have become so convinced of the increased value of thick cream over thin cream that many of them are paying one cent per pound more for cream testing 30 per cent. and over, than for that testing under 30 per cent.

The reasons for this are :

**First**—Thick cream makes better butter because it contains less milk and therefore keeps in better condition.

**Second**—Thick cream is so much less in quantity that the cost of transportation is less.

It is so much better for the dairyman to make thick cream because he has more skimmed milk left at home to feed calves. It then follows that dairymen should buy only such separators as can separate thick cream.

## U. S. CREAM SEPARATORS

LEAD THE WORLD IN  
THIS PARTICULAR

Beware of the cheap and poorly constructed separators that cannot make thick cream. They would be expensive even if furnished without cost.
