

## BUILDING Without Skilled Labor

Practise the use of reinforced concrete—

- because it is a material that is locally available for the majority of building requirements.
- because it saves time in erection.
- because it does not require so many skilled mechanics as other types of construction.

Reinforced Concrete building is further simplified by the use of

### CORR-PLATE FLOORS

They are a type of flat-slab construction that has many important features of interest to Architect, Contractor and Building Owner.

*Bulletin and full particulars sent in response to request on business letterhead.*
