It is estimated that every minute throughout the world 3,000,000 matches are lighted. The number of matches used in the entire year is 1,500,000,000,000, and of these it is said one-half are used in the United States. Only the choicest portions of the best trees are suitable for matches. Sapwood and knotty or cross-grained wood will not do. Instead of being a by-product the match is turned out in mills where the by-products are bulky objects like doors, sash, shingles, siding, posts and cordwood. The pine, linden, aspen, white cedar, poplar, birch and willow are the most suitable match timbers.
