

# COLGATE'S TALC POWDER

## A Summer Necessity

THE skin must be protected from its natural enemies—wind, dust and sun—and also from chafing. In Summer it is especially necessary to use plenty of Colgate's Talc.

The 10.54% Boric Acid—not found in other talcs—is soothing and mildly antiseptic. It is the safest and best Talc.

## For Baby's Comfort and Yours

After the bath, dust well all over with your favorite perfume of Colgate's Talc. It will add to the pleasure of all sports, so be sure to take plenty with you on your vacation.

Colgate's Talcs give just a hint of perfume to the skin—so elusive that men prefer Colgate's after shaving.

No matter where you buy Colgate's Talc, it is the same high quality, soothing and protecting, and as light as thistle down.

### "A Babe in the House"

We have secured the rights to Marianna Wheeler's authoritative book, "A Babe in the House". A special edition, illustrated by Rose O'Neil and Shirley Kite, has been prepared, and will be sent to any address upon receipt of 10 cents in stamps, with your name and address.

Colgate Preparations enter intimately into the early days of baby's life, but the book covers far more than Talcs, Soaps, Toilet Waters, and Dental Cream. It gives authentic advice on the month-to-month feeding and care of the child.

Send ten cents in stamps with your name and address, and ask for the book, "A Babe in the House."

## We Invite You—

To make careful comparisons with any other Teas on sale, as this will only strengthen your conversion to the use of

with the camel's cushion-like  
play feet, the llamas undoubtedly  
belong to the camel family. They have  
the camel's nature, for though more  
vigilant than the camel, they possess  
the same dull imperturbability, and  
their identical stubborn, morose dis-  
position, and seem to consider man  
their hereditary foe, only to be obeyed  
by compulsion and with spitting spit-  
tles and groans.

Easily Controlled by Indians.  
Only the Aymara and Quecha Indi-  
ans seem to inspire them with affec-  
tion to any degree, and to be able to  
control them for useful purposes; and  
where a Spaniard or Englishman  
would totally fail in herding or driving  
them, an Indian or Indian child of 6  
or 7, bare-legged in a cold driving  
wind, and wrapped in a llama or guan-  
aco hide, will with shrill, childish

scoldings, quickly round up and drive  
before him a whole band.  
The llama family, in prehistoric  
times had a much wider range than at  
present, their fossil remains being  
found from the republic of Colombia  
northward to Central America, and  
even as far north as Central Colorado.  
The llama and alpaca are domesti-  
cated, the guanaco and vicuña are still  
in the wild state, and this is one of the  
instances where domesticated animals  
range coexistent with their wild con-  
geners. Of the four kinds the guan-  
aco is the most numerous, and is found  
in bands of five to 500, and while con-  
fined to the high table lands else-  
where, in Patagonia, their range is over  
the plains and lower lands as well.

Both the guanaco and vicuña are  
easily tamed and readily take to cap-  
tivity, and from the wild guanaco and  
vicuña have sprung the domesticated  
llama and alpaca. The alpaca is kept  
upon the wild uplands, near the eter-  
nal snows and is only driven in to be  
shorn of its beautiful fleece of  
black or brown wool, which is so long  
that it often falls over its sides and  
back like a curling cascade reaching to  
the ground.  
As Beasts of Burden.  
The llama (pronounced "yawma") is

principally bred as a beast of burden,  
its hair is not so long and hangs but  
a short distance down the flanks, and  
it is of a more varied color than the  
alpaca; it is usually not all brown or  
black, but may be spotted or all white  
with bare patches upon its knees.  
When Pizarro and his fellow con-  
quistadores conquered the aboriginal  
Peruvians they found the llama the  
domesticated beast of burden. Under  
Spanish domination more than 300,000  
llamas were used to carry silver from  
the mines to the seacoast, but the com-  
ing of the horse, the burro and more  
than all else, the railway is gradually  
running it out, as it is timid and slow,  
and can travel with its 100-pound pack

only twelve to fifteen miles a day; yet  
it retains a certain advantage, as it is  
never fed on the trail, but forages its  
own living.  
The propagation of the llama and  
alpaca in Peru and Bolivia is almost  
entirely in the hands of the Indians,  
and is their mainstay in life. There is  
now probably over 300,000 llamas and  
a somewhat smaller number of al-  
pacas in Bolivia.

Two Cows  
"Beastly Drunk."  
Leads to the Discovery of a "Still" in  
the Pasture.  
Durham, N.C., July 18.—John King,  
a farmer living near this city, last  
night found two of his cows lying on  
the ground of their pasture in a stu-  
por, apparently suffering from some  
strange malady. A veterinary was  
called, and after a lengthy examina-  
tion, pronounced both animals as  
merely "beastly drunk."  
A search for the cause led to the  
discovery of a big "moonshine"  
"still" in a secluded corner of the  
pasture. The cows had eaten a quan-  
tity of the mash used by the illicit  
whiskey manufacturers.
